Bigmore Cottage & fence (Timmins)	Place no.: 1281	410
former tannery	Place no.: 1290	415
<b>6 INDEX TO STATE HERITAGE PLACES &amp; RECOMMENDATIONS .....</b>		<b>420</b>

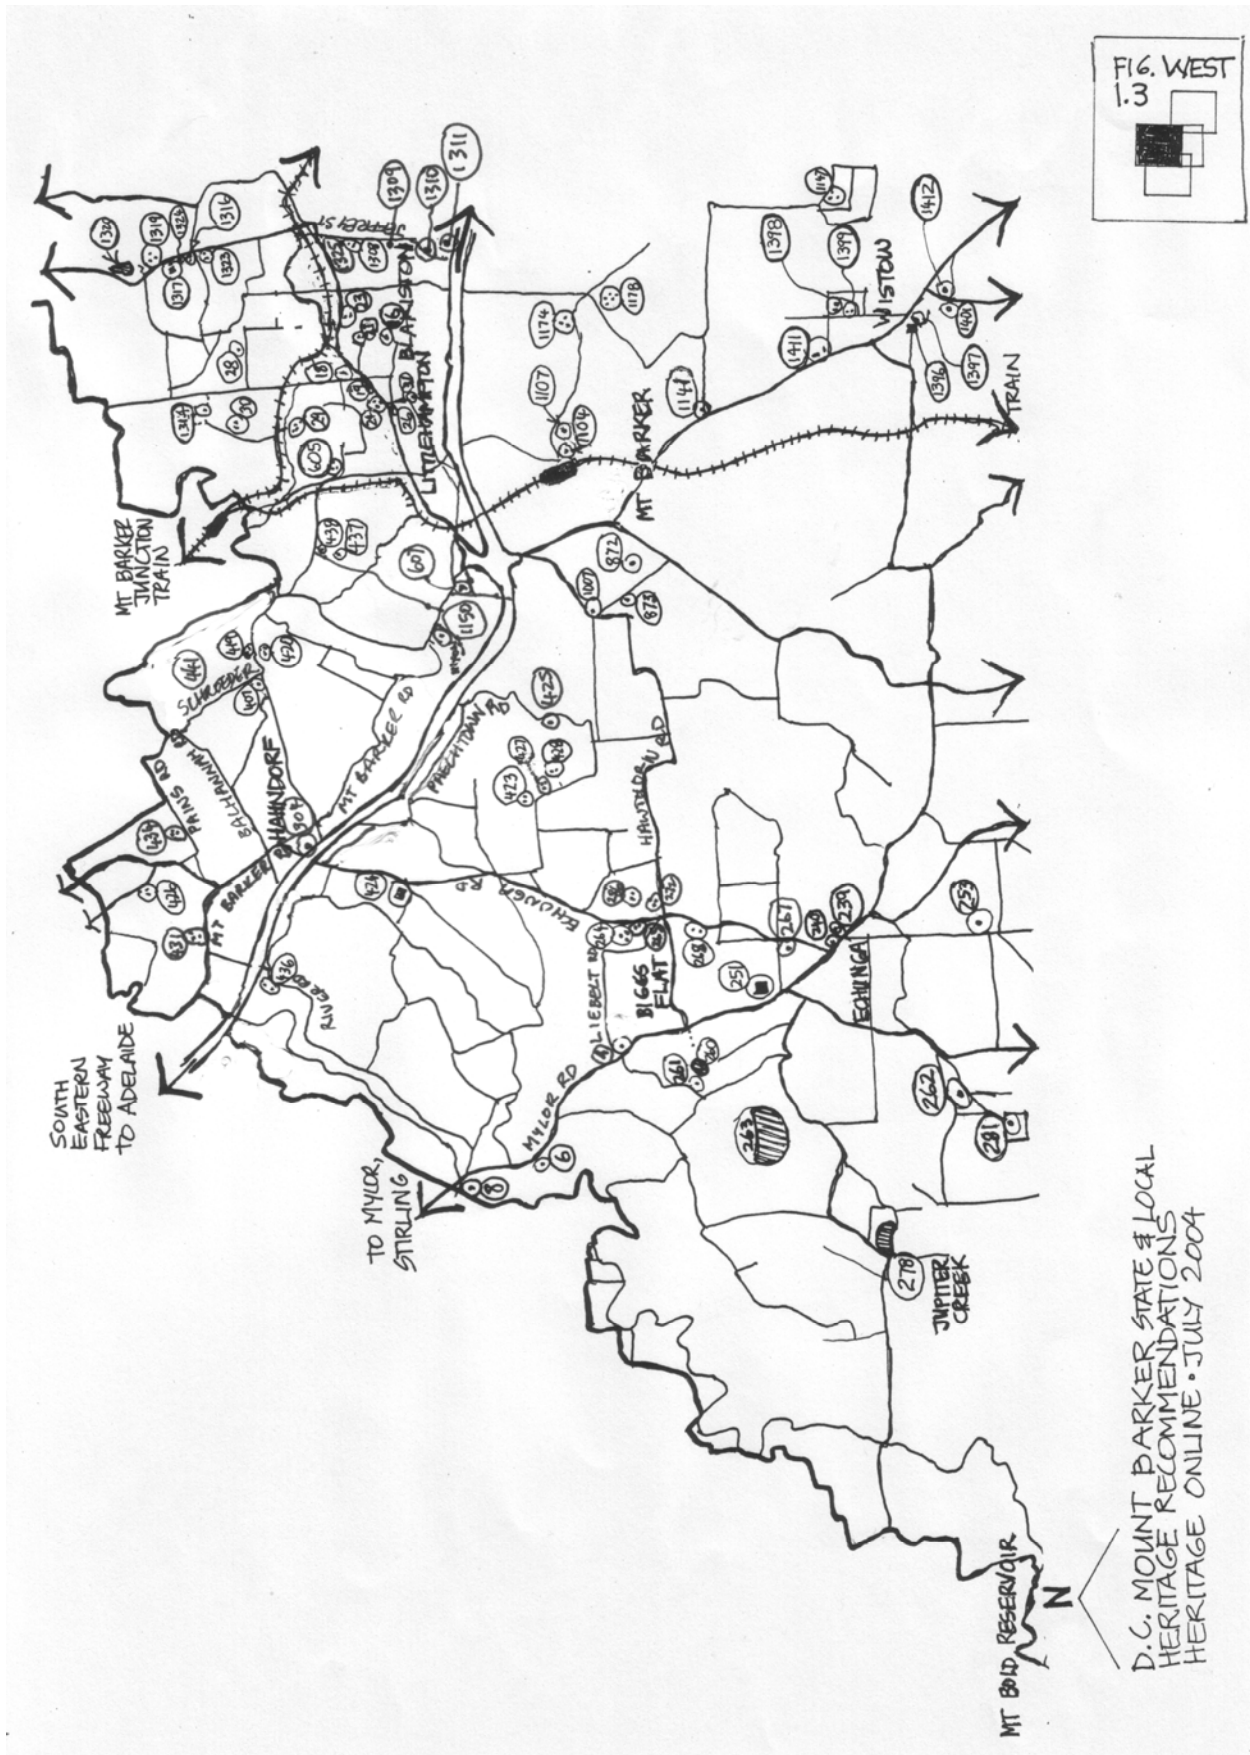

## 1 INTRODUCTION

The recommendations contained in this *Survey* emerged from a combination of historical research, community consultation and fieldwork. Those places recommended for retention in or inclusion in the State Heritage Register are documented in this volume of the survey, namely the *DC Mount Barker Heritage Survey (2004) ~ Part 2*. Places recommended for the State Heritage Register are those associated with the major historical themes in the district (see *section 2* of *part 1* of this report) or have exceptional representative qualities in the context of South Australia. These places are allocated survey numbers and are shaded in blue (dark-grey) in the inventory (*part 1: section 10*).

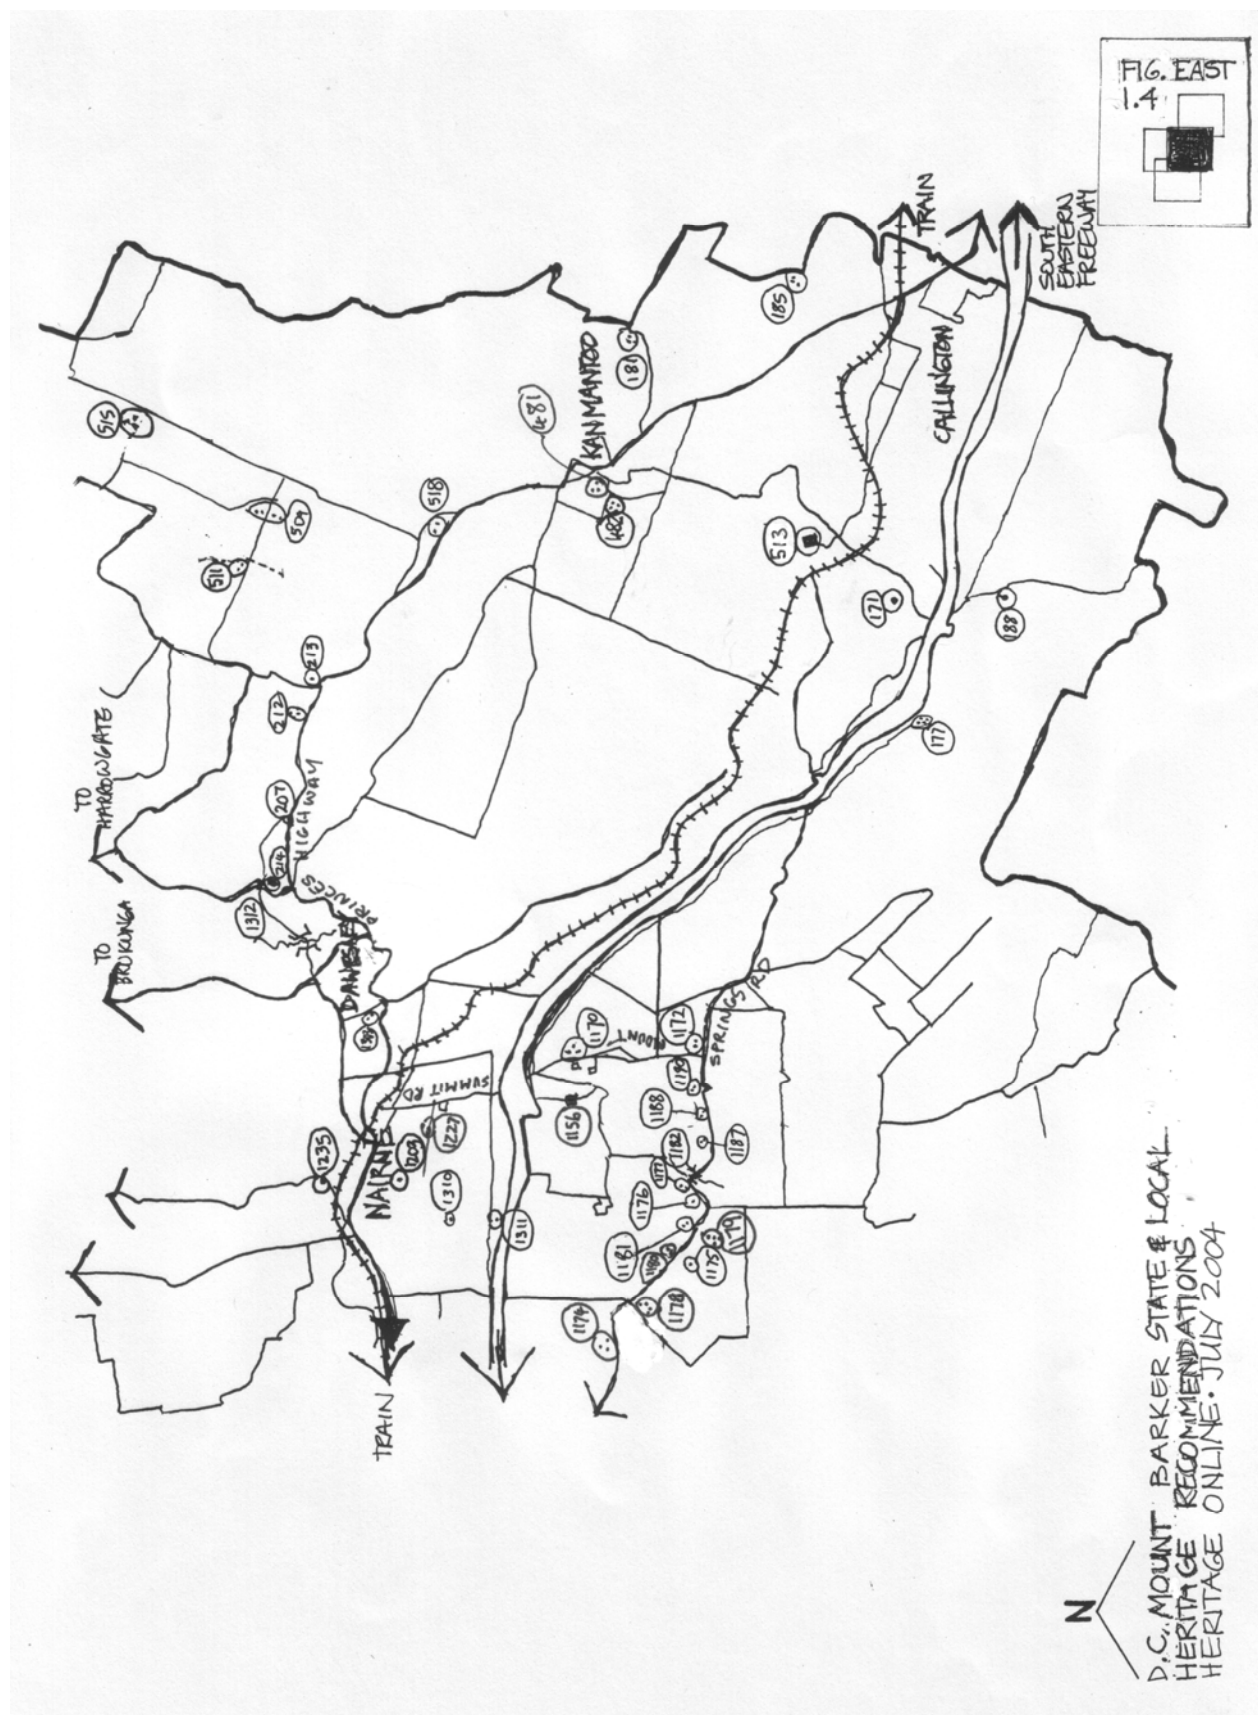

For those places outside of proposed Historic (Conservation) Zones or State Heritage Areas, their location is shown on the following maps (*figures 1.2-1.5*). The relevant map references are included in each recommendation report, and also in the key in *part 1, section 1*, and in the inventory (*part 1, section 10*).

## 2 STATE HERITAGE CRITERIA

The *Heritage Act 1993* provides the statutory basis for criteria under which places—land, buildings or structures—are assessed for entry in the State Heritage Register. There must be a process of selection, assessment and critical judgement involved in the entry of places in the Register. A place is of heritage value if it satisfies one or more of the following criteria:

- (a) it demonstrates important aspects of the evolution or pattern of the State's history; or
- (b) it has rare, uncommon or endangered qualities that are of cultural significance; or
- (c) it may yield information that will contribute to an understanding of the State's history, including its natural history; or
- (d) it is an outstanding representative of a particular class of places of cultural significance; or
- (e) it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics; or
- (f) it has strong cultural or spiritual associations for the community or a group within it; or
- (g) it has a special association with the life or work of a person or organisation or an event of historical importance.

### 3 FORMAT OF HERITAGE ASSESSMENTS REPORTS

The register assessment reports in this chapter are presented in the format recommended by the State Heritage Branch.

The 'place name' usually refers to the name by which a place is best known (if that name is a long-term ongoing name), or to its original owner. The place number relates to the number of the place which is found in the inventory for this heritage survey (Part 1, section 10).

The initial 'description' of the place is designed to complement the photographs, so that the place can be easily recognised. Those parts of the described fabric which are not considered to be of significance are enclosed in square brackets [x].

There is also a 'description' on the site record page, which is designed to summarise the various items which are included in the recommendation. This is then followed by a description of 'Significant fabric', which details that fabric which should be protected.

The crux of the report, follows the description on the first page and comprises the Statement of Heritage Value (aka Statement of Cultural Significance), and the discussion of the relevant criteria (see section 2 above for a list of the criteria). This statement and analysis will clarify what is outstanding about the place, and why it is of special value in the context of the State. It will only address those criteria which are met by the place in question.

Where there is additional historical information which is not included in the discussion of relevant criteria, it may be listed in the general 'history' section. This is followed by a list of references which either relate specifically to the place or help to provide a context for the significance of the place. Other historical information is provided on the 'site record' page, which includes the approximate date(s) of construction and the original and current uses of the building.

The 'site record' page also makes reference to any previous assessment of the place, and may comment on the condition of the place if it is 'at risk' or 'vulnerable'. This is designed to alert owners, Council, State Heritage Branch and relevant authorities to the potential need for some sort of intervention, and to provide an indication of future funding requirements.

## 4 CURRENT STATE HERITAGE PLACES

Any place may be entered in the State Heritage Register if it meets one or more of the criteria for entry under section 16 of the *Heritage Act 1993*. A place could include natural features, land, buildings and structures. The criteria help to determine whether a place is part of the *environmental, social or cultural heritage of the State*.

### 4.1 Summary of Recommendations

Within the District Council of Mount Barker, there are currently 57 places entered in the State Heritage Register (SHR). The recommendations relating to these State Heritage Places (SHPs) are summarised in the following table, and the detailed assessment forms are included in sections 4.2 – 4.4.

	St No	Street	Town	Place name	CT	Pope rec

## St James' Anglican Church, graveyard, rectory & belltower Place: 24

**Address** Princes Hwy, Blakiston

### ASSESSMENT OF HERITAGE VALUE

#### Description

**Church** constructed of local freestone with stone dressings including shaped voussoirs over lancets and a cgi gable roof. Features include lancet windows, buttresses, protruding parapets to gables, a stone belfry above front entrance, a stone porch with similar detailing including parapet cgi gable roof, and timber-framed doorways with timber doors. The church originally included leadlight windows which Davison brought from England, although those in the chancel have been replaced by Australian stained glass. The font was hand-carved by James Pollitt, St James' first minister. The timber in the sanctuary was formerly part of the original ministers pew [Martin 27]. The **rectory** is a stone house with stone dressings and a hipped cgi roof. Features include timber-framed openings, timber casement windows, French doors and doors, large stone chimneys and a raked cgi verandah on timber posts. The **graveyard** contains a variety of stone and marble gravestones and memorials, with many graves being fenced with cast-iron railings. The **belltower** is constructed of bricks with a timber upper structure including louvres and a cgi gable roof.

#### Statement of Heritage Value

This is South Australia's second-oldest Anglican church, displays fine construction and design, is an outstanding representative of a church precinct, and has significant associations with Francis Davison, Benjamin Gray and Amos Howard.

#### Relevant Criteria

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, being the second-oldest Anglican church in South Australia and having significant associations with the early religious development of the colony, and with the town of Blakiston and the Mount Barker district.
- (d) *it is an outstanding representative of a particular class of places of cultural significance*, being an outstanding example of a church precinct in terms of significant historical associations, good condition and high integrity.
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics*, the church demonstrating 1840s church design and construction techniques.
- (g) *it has a special association with the life or work of a person or organisation or an event of historical importance*, namely Francis Davison who established the church and the town of Blakiston; Benjamin Grey who designed and constructed the church and co-founded the town of Littlehampton, and Amos Howard who invented Subterranean Clover. All of these prominent South Australians are buried in the St James' Cemetery.

### RECOMMENDATION

This place is recommended for retention in the State Heritage Register.

## St James' Anglican Church, graveyard, rectory & belltower Place: 24

---

### ASSESSMENT OF HERITAGE VALUE

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Although not the first denomination to build churches in South Australia, the Church of England were the first to construct 'permanent' church buildings. Their first church Holy Trinity on North Terrace was the colony's third purpose-built church and one of six places of worship to be built in the first 4 years of settlement. However, it is the only surviving church from that period, and as such is the oldest church in South Australia. Subsequent Church of England churches were St John's at Port Adelaide (1841) and St John's in the Wilderness (Adelaide, 1845), both of which are now gone. The first Church of England church to be constructed outside of the city of Adelaide was St James' Blakiston. This is now the second-oldest Anglican church in South Australia, and as such is an important reminder of the early religious development of the Colony.

In addition, St James' Church has significant associations with the early settlement of Blakiston, and with the district of Mount Barker, for which it was the Church of England's principal place of worship for over a decade before churches were built in Mount Barker, Hahndorf, etc.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

Apart from sections of the cemetery (which are neglected and in need of conservation), this is a very well preserved church group which is an outstanding representative the early religious development in South Australia. The church, rectory, and grave of Benjamin Gray have all recently been restored, the latter two being winning entries in the 2004 Mount Barker Heritage Awards. The quality of the historical associations and physical character combine with a high integrity to create a church complex of State significance.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The church in particular is a very fine example of an 1840s chapel. It was constructed from local freestone to a simple design which included fine internal features such as leadlight windows imported from England. The church's high integrity contributes to its demonstration of 1840s construction methods and design.

**Criterion (g)** *it has a special association with the life or work of a person or organisation or an event of historical importance.*

Captain Francis **Davison** established both the town of Blakiston and the church. He purchased his Blakiston land from England then travelled out to South Australia aboard the *Cleveland* in 1839. Davison came prepared with a land order he had purchased in England and two pre-fabricated Manning houses. In 1840, he selected a property which he named Blakiston after his family's estate in Durham. In 1846, Davison founded the St James Church of England near his Blakiston House. This was the first Church of England to be constructed outside of Adelaide. Davison was a significant early landowner who not only founded the settlement of Blakiston but was also significant as a pastoralist and local magistrate. He acted as Chairman of the local Board of Road Commissioners and established several other properties in South Australia. The foundation stone for the church was laid by Elizabeth Davison, wife of Francis. The building was consecrated by Bishop Short and the first rector was Rev. James Pollitt. Benjamin **Gray** designed and constructed the church at Blakiston. He worked as a surveyor, designer and brewer, and later constructed the house (now Blakiston Hall) not far from the church where he brewed beer and kept cellars. In 1849 he purchased land on which he was a joint founder of the town of Littlehampton in 1851.

## St James' Anglican Church, graveyard, rectory & belltower Place: 24

### ASSESSMENT OF HERITAGE VALUE [cont.]

#### *Criterion (g)* [cont.]

Gray is buried in the St James' cemetery and his grave was recently the subject of an award-winning restoration. Amos **Howard** owned land near Blakiston and was a member of St James' church. In 1889, he discovered subterranean clover on his Blakiston property and began production and distribution, revolutionising agriculture in many parts of South Australia. Howard is commemorated by a memorial plaque near his Blakiston property and is buried in the St James' Cemetery.

### HISTORY

Constructed in 1846, this was the first Church of England in the Adelaide Hills. The belltower was constructed as a memorial to Dr Octavius Weld and his wife Anne.

**Erskine Bridge****Place no.: 122**

---

**Address** Bridge St, Callington

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Bridge consisting of stone piers and abutments supporting a steel-truss structure with concrete decking.

**Statement of Heritage Value**

This is a fine example of a late-19<sup>th</sup>-century stone and metal bridge which has significant associations with the development of Callington.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, being associated with the third phase of development of Callington, and closely associated with the local mining boom of the early 1870s.
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics*, being a fine technical example of a stone and steel bridge of 1870s.

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

---

## Erskine Bridge

Place no.: 122

---

### ASSESSMENT OF HERITAGE VALUE

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

The town of Callington flourished during periods of local mining prosperity. The first of these was in 1847-49 when copper was first discovered near the Bremer, many miners arrived to work there, Australia's first smelter was established, and the town of Callington was formed. The mine was reopened with fresh enthusiasm in the late 1850s and early 60s when the first and second pumps were installed by the Worthing Company under Alfred Hallett's supervision, as well as sundry other mining structures such as the significant powder magazine and settling tank. The third period of rapid expansion in Callington was from 1872-78 when the mine was worked by the Bremer Mining Company. During this period, in 1874, a new crusher engine house and chimney were constructed at the mine (surviving structures). Also in 1874, a bridge was finally constructed over the Bremer River to provide easier access for Callington residents and visitors. This bridge was constructed by David Chapman who won the contract in Spring 1873, and completed the construction for £923 16s 2d. The bridge was opened in March 1874 by Mr West-Erskine, former MP and Commissioner for Public Works. It has since become known as the Erskine Bridge. It was reconstructed in 1890, and has been little altered since that time. It also known as the Johnson Bridge.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

Being a well-preserved example of a late-19<sup>th</sup>-century bridge which demonstrates a high degree of technical accomplishment for the period. The bridge needed to cover a relatively big span and was constructed using a combination of stone piers and steel trusses.

---

### HISTORY

After a public meeting on 6 September 1872, the residents of Callington petitioned for a bridge in 1872. The bridge was commissioned in the following year and completed in March 1874. It was then reconstructed in 1890 and has been little altered since its original construction.

## Lavende house, wall & outbuildings, fr police complex Place no.: 145

**Address** (2) Montefiore St, Callington

### ASSESSMENT OF HERITAGE VALUE

#### Description

Single-storey police house constructed of dressed imported sandstone with hand-picked stone dressings and a hipped cgi roof. Features include a concave cgi verandah with turned timber posts and cast-iron lace brackets, red-brick chimneys, paired dentils to eaves, and timber-framed openings with timber doors & timber-framed double-hung sash windows. Cells have random stone walls with red-brick coping and timber doors. Stable, outhouses & former exercise yard also have stone walls, with a cgi roof to former. Wall of exercise yard is over 14" thick and over 4.3m high.

#### Statement of Heritage Value

This is one of the finest mid-to-late-19<sup>th</sup>-century police stations in the State and has close associations with the development of Callington during that period.

#### Relevant Criteria

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, being associated with the development of Callington from the 1860s to 80s (when the police station was open) and more recently as a tourist destination.
- (d) *it is an outstanding representative of a particular class of places of cultural significance*, being a well-preserved group of 1860s police buildings which displays not only a police station house of outstanding quality, but also cells, stables and an exercise yard.

### RECOMMENDATION

This place is recommended for retention in the State Heritage Register.

### ASSESSMENT OF HERITAGE VALUE

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

The town of Callington flourished during periods of local mining prosperity. The first of these was in 1847-49 when copper was first discovered near the Bremer, many miners arrived to work there, Australia's first smelter was established, and the town of Callington was formed. The mine was reopened with fresh enthusiasm in the late 1850s and 60s when the first and second pumps were installed by the Worthing Company under Alfred Hallett's supervision, as well as sundry other mining structures such as the significant powder magazine and settling tank. By 1867, a police station was constructed in Callington at a cost of £1145. The station was an impressive building which incorporated a residence as well as having a significant number of auxiliary structures including not only the usual cells, but also an exercise yard with gate, stables and outhouses. The station followed the fortunes of the town, and after the mine closed in 1886, the population of the town decreased and the police station was closed. It is now used as a private residence and tourist destination which offers bed & breakfast, café, gardens and a museum.

**Criterion (d)** *it is an outstanding representative of a part. class of places of cultural significance.*

This is an outstanding surviving example of a police station complex of the 1860s, especially as the exercise yard and stables survive in good condition, in addition to the fine station building and well-preserved cells. Designed by the Colonial Architect's Department, it has a similar

design to the stations at Mintaro and Truro. The style of the station is Victorian Classical Revival with a symmetrical front and typical detailing.

---

**Lavende house, wall & outbuildings, fr police complex      Place no.: 145**

---

**HISTORY**

Constructed in 1867, the police station includes a large underground tank which provided water during the construction of the Kanmantoo railway reservoir. The first police officer to be stationed at Callington was Police trooper O'Connor. There were two officers stationed here until 1886.

**Aclare Mine Historic Site****Place no.: 188****Address**

P/S 1296 Springs Rd, nr Callington

**ASSESSMENT OF HERITAGE VALUE****Description**

Lead-silver mine including substantial underground working and a number of stone buildings above the surface. The remains of the engine house comprise stone walls and some openings. The furnace is a well-preserved stone structure with a round-topped door and three rectangular 'windows' below ceiling level. The chimney has a square footprint with plinth & semi-circular-headed opening to ground level, and projecting courses providing detailing to hips and summit. There are also the stone remains of the manager's office.

**Statement of Heritage Value**

The Aclare Silver-Lead Mine produced more silver than any other South Australian mine in the 19<sup>th</sup> century, and is an outstanding surviving example of a silver mine. The buildings display fine design and construction techniques, include a rare surviving type of furnace, and provide an evocative marker for the Callington/Kanmantoo mining district.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, both in terms of its significance as South Australia's highest silver producer in the 19<sup>th</sup> century, and its contribution to the significant mining heritage of the Callington area.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, retaining a rare type of furnace.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being a silver-lead mine of outstanding historical significance to the State, and being an outstanding surviving example of a group of mine buildings.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, displaying a high quality of design and construction.*
- (f) *it has strong cultural or spiritual associations for the community or a group within it, being a notable cultural marker for an area defined by its mining history.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**Aclare Mine Historic Site****Place no.: 188****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Silver was first discovered on Osmond Gilles' property at Glen Osmond in 1838, and in 1840 South Australia's first silver-lead mining took place at Wheal Gawler. In fact this was the earliest recorded metal mine in Australia. Between 1840 and 1890, 1.5 tonnes of silver were produced from Glen Osmond Mines. A much more valuable deposit of silver was found near Kanmantoo in 1859. From 1868, small-scale mining took place there, but it wasn't until 1882 that the Aclare Mining Company took over the lease of the property and made substantial capital improvements to increase production. Some of the surviving structures date from this period. By 1884, the mine closed again due to a fall in the price of silver. The main period of development of the mine was in the early 1890s. In 1891, the former Government Inspector of Mines (David Rosewarne) took over management of Aclare and constructed many buildings and supervised substantial extensions to the underground workings. A smelting furnace was installed in 1895, yet another fall in the price of silver led to final closure of the mine in 1899. Thus the mine reflects the waxing and waning of silver mining which occurred in the latter half of the 19<sup>th</sup> century. Also, despite having only been used for relatively short periods between 1868 and 1899, Aclare actually produced 15.5 tonnes of silver, more than any other silver mine in South Australia. It was also used for the training of mining engineering students during the late 20<sup>th</sup> century. Not only is the Aclare mine closely related to the history of silver mining, but it is also one of the most significant mines in one of South Australia's key mining areas. The location of the mine ruins adjacent to the South Eastern Freeway provides potent physical evidence of the significant mining heritage of this area.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

There are few surviving silver mines in South Australia, and the Aclare mine includes specific representatives of several rare building types associated with silver mining. The furnace in particular has a high integrity and is the only example of a French-Stewart furnace in the State.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

The Aclare mine produced more silver than any other South Australian mine during the 19<sup>th</sup> century. It is also one of the best surviving examples of a silver-lead mine in South Australia and has outstanding associations with the history of silver mining in the Colony. The fact that the chimney & lower part of the engine house still survive, and that the furnace structure is the best surviving example of its type, make this group an outstanding representative of mine buildings.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The chimney at the Aclare mine has an elegant design and is well constructed. It remains one of the best surviving examples of a square mine chimney in the State and displays an outstanding quality of design and technical accomplishment. The furnace is the only example of a French-Stewart furnace in the State and well-represents this specific technical achievement.

**Criterion (f)** *it has strong cultural or spiritual associations for the community or a group within it.*

Because of its prominent location adjacent to one of South Australia's most important roads (the South Eastern Freeway), the Aclare Mine ruins provide a significant marker to an area whose character is defined by its mining history.

## Aclare Mine Historic Site

Place no.: 188

---

### HISTORY

The mine operated on-and-off from 1868 to 1899, during which time it produced 1,200 tonnes of lead and 15.5 tonnes of silver, it's ore being particularly silver-rich.

**Chapel Hill Diggings, Echunga Goldfield****Place no.: 263**

---

**Address**                      Sec 393 Diggings Rd, nr Echunga
 

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Densely-covered bushland on a hillside rising to the north including a number of shafts, adits (some collapsed) and underground workings, and the remains of three dams (National, German & Prince Alfred) constructed to facilitate the treatment of ore. Adjacent to the National Dam are the stone remains of a treatment plant.

**Statement of Heritage Value**

The Chapel Hill Diggings are an important surviving precinct of one of South Australia's most significant and earliest gold mining areas. They also provide information about the development of gold mining techniques during the 1850s.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, being an important surviving section of the significant early goldfields at Chapel Hill.
- (c) *it may yield information that will contribute to an understanding of the State's history, including its natural history*, displaying the development of gold mining during the mid 19<sup>th</sup> century.

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

---

**ASSESSMENT OF HERITAGE VALUE**

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

The Chapel Hill Diggings comprise one of South Australia's most significant and earliest gold mining areas. Gold was first reported on the banks of the Onkaparinga in 1849 (Thomas Waterhouse & surveyor John Phillips), but it wasn't until 1852 that an official 'discovery' was made by William Chapman. This was considered the Colony's most important gold find to date, and hundreds of men rushed to the area to commence digging. At its peak, there were up to 600 miners living or working near the goldfield. By the end of 1852, the rush was over and many miners moved on to other localities. But within that one year, the Echunga goldfields produced more gold than any other goldfield in the State would in a single year. The value of production from Chapel Hill is estimated at between £10,000 and £18,000. The reserve which is currently included in the State Heritage Register comprises only about half of the extent of the diggings, and provides a significant historical record of the important role of the Chapel Hill area in South Australia's gold mining history.

**Criterion (c)** *it may yield information that will contribute to an understanding of the State's history, including its natural history.*

The Chapel Hill diggings provide information of early methods of gold mining in the State, as well as the development of mining methodology during the mid 19<sup>th</sup> century, displaying the 'continuum of mining techniques used in the working of deep alluvial leads' (RNE Report 16754).

## Chapel Hill Diggings, Echunga Goldfield

Place no.: 263

---

### HISTORY

The Chapel Hill area included Chapmans Gully, the site of the first gold find the area. The diggings have also been referred to as the Echunga goldfields. Only the forest reserve section of the diggings is currently on the State Heritage Register. The rest of the goldfields are in private ownership and have been recommended for the local heritage register.

**Jupiter Creek Diggings****Place no.: 278**

---

**Address**Rubbish Dump Rd, Jupiter Creek, nr Echunga

---

**ASSESSMENT OF HERITAGE VALUE****Description**

The mine workings are located along a bush-studded hill-side which follows the eastern side of the Onkaparinga at Long Gully. Surviving fabric includes shafts and adits (some collapsed), various stone ruins including the battery plant at Beatrice mine, a circular chimney constructed of local stone and mud at Beatrice mine, a timber-framed cgi-clad 1930s cottage, and two reservoirs.

**Statement of Heritage Value**

The Jupiter Creek diggings produced more gold than any other mine in South Australia, and demonstrate the development of gold mining over many decades. The mine precinct also contains several uncommon surviving examples of mine structures including a circular chimney and a 1930s miners' cottage.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, being South Australia's most significant gold mine and demonstrating many aspects of the development of gold mining in the State.
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance*, retaining uncommonly surviving examples of a chimney and miners' cottage located at a significant goldfield.
- (c) *it may yield information that will contribute to an understanding of the State's history, including its natural history*, being a notable area of gold mining activity which demonstrates the development of a variety of mining techniques and has significant associations with the technical development of gold mining in South Australia.

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

## Jupiter Creek Diggings

Place no.: 278

---

### ASSESSMENT OF HERITAGE VALUE

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

The 'Echunga Goldfields' were one of the most significant gold-producing localities in South Australia. There were two main areas of operation at Echunga: Chapel Hill & Jupiter Creek. The Chapel Hill diggings (including Chapman's Gully) were the earliest gold-mining precinct in Echunga, and were the locale of a brief but extremely productive rush in 1852. The Jupiter Creek diggings were the site of the largest and most sustained gold mining activity in the Echunga area, and the most productive in the State.

Gold was discovered at Jupiter Creek in July 1868 by Thomas Plane and Henry Saunders. The subsequent rush was the most significant in South Australia to date. By the end of the year, there were 1,500 people living at Jupiter Creek, and buildings included hundreds of shanties, dug-outs and huts as well as a hotel, two stores and a wine shop. Mining development included dozens of shafts dotted over a kilometre of hillside to the east of the Long Gully creek. There was also a chimney constructed at the Beatrice mine in 1869 to provide updraught for a steam engine (chimney survives, see Selby 71), a crushing plant (now gone) & two dams. A 1930s timber-framed cgi-clad cottage also survives at the site. These all represent a significant history at Jupiter Creek, where not only was the largest value of gold produced in the State, but a significant record of the variety and development of mining methods can be found.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The chimney and cgi cottage being uncommon surviving examples of structures located at the site of significant gold diggings.

**Criterion (c)** *it may yield information that will contribute to an understanding of the State's history, including its natural history.*

Due to its long life and rich mineral content, the Jupiter Creek diggings have produced more gold than any other mine in South Australia. The gold from Jupiter Creek is also notable for its purity, and gained a reputation for being of the highest quality. The surviving structures and diggings provide a significant insight into the development of gold mining in South Australia, and the various techniques which have been used since 1868. In particular, the mining development of the late 1860s and 1870s, the introduction of hydraulic sluicing in 1908, and the reworking of the mine during the 1930s depression are represented at the site.

## Jupiter Creek Diggings

Place no.: 278

---

### HISTORY

Discovered in 1868, the mines were worked for over a century.

---

**Schach House****Place no.: 320**

---

**Address** 1 Mt Barker Rd, Hahndorf

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Single-storey cottage with loft above. Walls are half-timbered with pug and brick infill. Cgi gable and hipped roof with window to gable end. Features include timber-framed openings with timber door and timber casement windows, raked cgi verandah to front [with infill to north end], skillion-roofed addition with red-brick chimney to rear, and a central red-brick chimney.

**Statement of Heritage Value**

This is an excellent and uncommon surviving example of a German half-timbered house which has significant associations with the German cultural Heritage of South Australia, and which demonstrates half-timbered house construction.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, having significant associations with the special German heritage of Hahndorf.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, being a relatively uncommon surviving example of a German half-timbered cottage.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, displaying early German half-timbered construction.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

*Side of Schach House, 2004*

**Schach House****Place no.: 320****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of South Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. The western side of the main street was not subdivided until 1849, when the land was purchased by Kanmantoo mine captain Joseph Remfrey (aka Remfry) who then surveyed it and sold off individual allotments during the next few years. In 1854, allotment 3 of section 3812 at the northern end of the main street was purchased by 'machine maker' Johann Gottlieb Schach, who constructed a house soon afterwards. It was subsequently owned by Frederick Kuchel and became known as Kuchel's Cottage. This is one of the oldest surviving buildings on the western side of the main street. The typical German construction of this cottage and its relatively-good condition make it a significant surviving example of early German development in Hahndorf.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The use of German half-timbered construction was relatively common in 19<sup>th</sup>-century South Australia. However, many of these early German constructions are now gone, and those which survive are now relatively uncommon.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

This 1854 half-timbered house displays typical early German design and construction techniques, particularly the construction of the walls with pug and brick infill to substantial timber frame, and the loft windows at the gable end.

**ASSESSMENT OF HERITAGE VALUE****Description**

Stone church building with a 20m spired tower, cgi gable roof, lancet and round windows, timber doors, front porch and rear vestry, and stone detailing including plinth, coursing and turrets.

**Statement of Heritage Value**

This is significant landmark in Hahndorf which demonstrates important aspects of the distinctive religious and cultural development of the town and displays high-quality design and construction.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, having significant associations with the development and heritage of Hahndorf, and in particular with the religious development of the town and the State.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, the 1890 church being a prominent architecturally-designed building which displays an outstanding quality of construction.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

*St Paul's Lutheran Church, 2003*

**St Paul's Lutheran Church****Place no.: 326****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. Hahndorf is of outstanding significance because of its profound associations with the first German settlers and their culture and religion. Settlers first arrived here in 1839, and by 1840 they had constructed the first 'Hahndorf Lutheran Church' of mud-bricks on Church Street. Hahndorf's first religious leader was Pastor Kavel, yet when a second Pastor arrived the church quickly became divided. Pastor Fritzsche and his followers strongly opposed many of the opinions and practices of Pastor Kavel. In 1846, the Bethany Synod recognised a division in the church, and by 1851 two separate churches were created namely the Evangelical Lutheran Church of Australia (led by Fritzsche who was based at Lobethal) and the United Evangelical Lutheran Church of Australia (led by Kavel who was based at Langmeil in the Barossa Valley). After bitter arguments and legal battles, Hahndorf's first church building, (now St Michael's) was ceded to the followers of Pastor Fritzsche, and Kavel's followers initially worshipped in the original manse which was located on Church Street diagonally opposite the original church (now gone). Subsequently, several of Kavel's followers followed him to the Barossa Valley, while those who remained constructed St Paul's church at the southern end of town. The first St Paul's was constructed on Windsor Avenue in 1858 (now used as a museum). This was not far from Hahndorf's second Lutheran church, St John's, which was constructed in 1857 on the site of what is now Braun Drive. The St John's congregation (Free German Protestants) had worshipped in the house at 2 Mt Barker Rd under Paster Kappler since c1852. The St John's congregation amalgamated with St Paul's in 1867, and their building was demolished in 1889. In 1890, the St Paul's congregation constructed a fine new church and neighbouring manse at 10-12 Mt Barker Rd. The church was designed by Macclesfield architect FW Dancker and was constructed by D Both of Eudunda for £1,260. St Paul's remained separate from St Michael's Evangelical Lutheran Church until the Lutheran Church of Australia became reunited in 1966. The St Paul's church has close associations with the development of Hahndorf's special cultural and religious identity, and demonstrates that significant heritage to the many people who live in or visit the town.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The 1890 St Paul's church building was designed by architect FW Dancker and constructed at a cost of £1,260. Distinguishing characteristics of the design of the church include its 20 metre-high spired belltower, and its fine stone construction using local Verdun stone. The building displays construction methods of outstanding quality.

## St Paul's Lutheran Church

Place no.: 326

*St Paul's Lutheran Church, 2003*

**Ophelia Cottage, former Bartel Cottage****Place no.: 345**

---

**Address** 34 Mt Barker Rd, Hahndorf

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Single-storey half-timbered house with loft. Walls are exposed timber-frames with rendered pug infill. The house also has a cgi gable roof with raked verandah, carved date of '1847', small vent holes and vertical boarding to gable, small dormer window to side, timber-framed opening including timber doors and casement windows, and red-brick chimneys.

**Statement of Heritage Value**

This is an outstanding example of a pioneer German cottage which displays early German construction techniques and has significant associations with the distinctive German heritage of Hahndorf.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, being an authentic early German house prominently located on the Main Street which demonstrates the distinctive cultural development of Hahndorf.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, being an uncommon surviving example of a half-timbered house.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an outstanding example of a pioneering German house.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, demonstrating pioneering German building techniques.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

## Ophelia Cottage, former Bartel Cottage

Place no.: 345

### ASSESSMENT OF HERITAGE VALUE

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area; demonstrate the German way of life and construction methods; and contribute to the strong heritage character of a town which is one of South Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. One of the oldest surviving houses in this original subdivision was **constructed by Christian Bartel in 1847**. In 1855, Bartel moved to Callington and the property was sold to Carl Herberger, who then sold it to Valentin Hellwig later the same year. During **1861**, the property was transferred first to Wilhelm Paech and then to **Johann Willemer**. Willemer established a carpenter shop and undertakers business in the morgue next door, and lived in the former Bartel Cottage. His daughter Ida married 'labourer' Julius Rodert who worked with Willemer in his undertaking business. During the late 20<sup>th</sup> century, the former Bartel cottage was carefully restored and renamed Ophelia Cottage. It makes an authentic contribution to the strong Hahndorf character.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The use of German half-timbered construction was relatively common in 19<sup>th</sup>-century South Australia. However, many of these early German constructions are now gone, and those which survive are now relatively uncommon. Also, in South Australia's first two decades of development the most common roofing material was timber shingles. Shingles were usually replaced with iron by the end of the century, and now there are few surviving examples of this once prolific roofing material. Thus the surviving shingle roof at Ophelia Cottage is an uncommon example of a significant early feature.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is one of the oldest surviving half-timbered houses in the State and is an outstanding example of its type. The exposed timber frame has been carefully restored, and the building is an outstanding representative of German construction methods of the late 1840s. Ophelia Cottage also makes a significant contribution to the heritage and interpretation of the town of Hahndorf, a town which contains the most significant group of pioneering German development to be found anywhere in Australia. Thus the house is both an outstanding example of its construction and type, and a vital component of Australia's most significant German heritage precinct.

## Ophelia Cottage, former Bartel Cottage

Place no.: 345

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The exposed half-timbered frame with carefully rendered infill provides an outstanding representative of pioneering German construction techniques. The house also demonstrates one of the typical building designs of South Australia's earliest settlers.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

1854 half-timbered house displays typical early German design and construction techniques, particularly the construction of the walls with pug and brick infill to substantial timber frame, and the loft windows at the gable end.

### HISTORY

The former Bartel cottage was owned by Stefan Heysen from 1949-55, and it was later rented by Walter Wotzke. This house was also known as the Harlewood Studio in the late 20<sup>th</sup> century.

*Ophelia Cottage, 2004*

**Hahndorf Inn Hotel****Place no.: 346**

---

**Address** 35 Mt Barker Rd, Hahndorf
 

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Two-storey hotel with stone ground floor and [rendered] brick upper level including classically-detailed parapet with coursing and dentils, and unrendered lower level. The hotel has a hipped roof, bull-nose balcony roof, timber-framed openings with timber-framed multi-pane double-hung sash windows to upper level, timber doors and rendered chimneys.

**Statement of Heritage Value**

This is an important Hahndorf landmark which displays a high level of design and construction.

**Relevant Criteria**

- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics,*  
This is an outstanding example of a hotel building which demonstrates a high quality design and construction.

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

---

**ASSESSMENT OF HERITAGE VALUE**

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

This is an excellent example of a hotel building which displays a fine symmetrical design and high level of stone craftsmanship. The upper section of the building has been rendered and has segmental arches over openings. The lower section displays fine cut-stone detailing including shaped voussoirs. The rendered parapet has projecting coursing and dentil moulding.

NOTE: This place may be suitable for removal from the Register after a thematic survey of hotels has been completed, at which time it can be compared with other examples of stone hotel buildings of the 1860s. It is certainly one of the best examples in the district, but may be of less significance in the context of the State, due to the relatively high number of fine 1860s hotel buildings which still exist in South Australia.

## Hahndorf Inn Hotel

Place no.: 346

### HISTORY

This hotel was first licensed by GA Schulze in 1863, the license having been transferred from the earlier Australian Arms hotel at number 46. The Hahndorf Inn was originally known as the Union Inn (from 1863), then Union Hotel (1918–63), then Hahndorf Hotel. It has been called the Hahndorf Inn since 1972.

Place no.: 346

*Hahndorf Inn Hotel, 2004*

---

**Shop, former Morgue****Place no.: 347**

---

**Address** 36 Mt Barker Rd, Hahndorf

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Large stone building with cellar, loft and skillion extension, stone dressings and sills, half-hipped timber-shingle roof (reconstructed in 1980s), timber-framed openings with multi-paned shop window, timber multi-paned loft windows at gable ends, and timber doors. [To the rear is a contributory 1980s outbuilding constructed using traditional design and materials. It has horizontal timber slabs with timber-framed openings, multi-paned windows and timber barn doors, a timber-shingle gable roof and a central red-brick chimney. There is also a rear barn with brick and slab walls and a cgi gable roof, and a courtyard with stone flag floor and a cast-iron well-pump.]

**Statement of Heritage Value**

This is an outstanding surviving mortuary building which demonstrates German design, and has close associations with the early development of Hahndorf and with the history of morgues and undertaking in this State.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, having significant associations with the early development of Hahndorf and with the history of morgues and undertaking in this State.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, namely, being a rare surviving example of an early morgue building.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being a excellent surviving example of a morgue building and the best-known example of a morgue which was used as a private business.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, displaying German design and construction, especially in the use of a loft, half-hipped roof, and timber shingles for roofing.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

## Shop, former Morgue

Place no.: 347

---

### ASSESSMENT OF HERITAGE VALUE

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of South Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. One of the oldest surviving houses in this original subdivision was constructed by Christian Bartel in 1847 (Ophelia Cottage next to morgue). In 1855, Bartel moved to Callington and the property was sold to Carl Herberger, who then sold it to Valentin Hellwig later the same year. During **1861**, the property was transferred first to Wilhelm Paech and then to **Johann Willemer**. Willemer established a carpenter shop and undertakers business in the morgue building and lived in the former Bartel Cottage next door (now Ophelia Cottage). Records located in the loft of the morgue in the mid 20<sup>th</sup> century suggest that the morgue building was actually constructed in 1856. Nevertheless, it is Willemer's business which is most closely associated with the 19<sup>th</sup>-century history of the building. His daughter Ida married 'labourer' Julius Rodert who worked with Willemer in his undertaking business, and inherited it after the death of his father-in-law. Evidence of Willemer's business includes coffinwood which was found by Stefan Heysen in the cellar in the mid C20 and business documents found in the loft (dating back to 1856). The cellar of the former morgue were also used as wine cellars by Rabensberg wines for many years.

There is also a mid-19<sup>th</sup>-century stone well and flag-stone courtyard to the rear of the morgue. In the 1980s, two timber-slab outbuildings were constructed by Jimmy Elder using traditional German materials and proportions. The former morgue makes a vital contribution to an understanding of the development of the town of Hahndorf, and gives insight into the early way of life of the pioneering German families. It also has special associations with the early development of morgues and undertaking in South Australia.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

This building is of an uncommon type, there being few morgues surviving in the State. Of those which do survive, the Hahndorf morgue is a rare example because it was a private business and retains a well-documented history.

**Shop, former Morgue****Place no.: 347**

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

There are currently only two individual morgue buildings entered in the State Heritage Register: the morgue of the former Adelaide Lunatic Asylum (which is now part of the Adelaide Botanic Garden), and this Hahndorf morgue. Rodert's morgue at Hahndorf is the only State Heritage listed morgue associated with a private business (ie. not part of an institution, gaol or hospital). As such, it is a significant early business premises, especially as it represents an important part of the 19th-century way of life which has now become very different. The way in which Colonial South Australians dealt with death was far removed from our modern processes. Thus, the Hahndorf morgue is an outstanding representative of this significant type of place. The morgue building, outbuildings and stone well also comprise an excellent example of a pioneering German business premises.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The finely constructed stone morgue building is of special interest for the German design and proportion of the building which includes a cellar and loft, for the design of the half-hipped roof, and for the significant and rare use of exposed timber-shingles for roofing.

Two-level half-timbered building (of residential appearance) with exposed timber frame and rendered pug infill, a half-hipped cgi roof, timber-framed openings with timber doors and multi-paned windows to loft and casements.

**Statement of Heritage Value**

This is an outstanding example of an early half-timbered hotel building which has significant associations with the German heritage of Hahndorf and displays typical German design and construction techniques.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, having significant associations with the German history and heritage of Hahndorf and of the State.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, being an uncommon surviving example of half-timbered and pug construction and a rare surviving example of a half-timbered hotel building.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an outstanding example of its construction and type, and a vital component of Australia's most significant German heritage precinct*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, displaying typical pioneering German design and construction.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**former Australian Arms Hotel****Place no.: 352****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of South Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. One of the earliest buildings in the town was the German Arms hotel which was first licensed in December 1839, only months after the first settlers arrived in the town. In 1854, passing gold-rush traffic led to the establishment of Hahndorf's second inn, the Australian Arms. This was constructed in 1854 by Gottlieb Andreas Schuetze, chair of St Michael's rebuilding committee. It was used as a hotel until 1863, when the license was transferred to the new Union Hotel across the road (now the Hahndorf Inn). The former Australian Arms was subsequently used as a residence and shop. In the late 20<sup>th</sup> century, the northern additions to the building were removed. However, the core of the form of the original hotel building has been retained, and its distinctive German style and construction make a substantial contribution to the strong German character and heritage of Hahndorf, as well as to an understanding of the early commercial development of the town.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The use of German half-timbered construction was relatively common in 19<sup>th</sup>-century South Australia. However, many of these early German constructions are now gone, and those which survive are now relatively uncommon. It is also a rare surviving example of a half-timbered hotel building.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is an excellent surviving example of a pioneering German half-timbered building with a half-hipped roof. It is also a rare surviving example of a half-timbered hotel building. The former hotel also makes a significant contribution to the heritage and interpretation of the town of Hahndorf, a town which contains the most significant group of pioneering German development to be found anywhere in Australia. Thus the hotel is both an outstanding example of its construction and type, and a vital component of Australia's most significant German heritage precinct.

**former Australian Arms Hotel****Place no.: 352**

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The former Australian Arms is a good surviving example of pioneering German building design and techniques, especially the wall construction comprising exposed timber frame with pug infill, the loft windows at the gable ends, and the half-hipped roof.

The workers' cottages to rear are a stone row with cgi gable roof and timber-framed openings.

**Statement of Heritage Value**

This is one of the earliest surviving shop and residences to be constructed in Hahndorf and is an excellent surviving example of its type and construction method.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, having significant associations with the early development of Hahndorf and the earliest establishment of pioneering German business and residences.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an important surviving example of a pioneering German shop residence including separate workers' accommodation.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

### ASSESSMENT OF HERITAGE VALUE

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of South Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. The western side of the main street was not subdivided until 1849, when the land was purchased by Kanmantoo mine captain Joseph Remfrey who then surveyed it and sold off individual allotments during the next few years. The 'Jaensch' house was constructed at some point during the mid 1850s. In 1853, Remfrey sold part of section 4234 to miner Henry Treloar, who then sold it on to stonemason Johann Stade later the same year. Stade possibly built the current house at that time, and then sold the property to Dr Friedrich Landvoigt in 1854. Landvoigt mortgaged the property to Carl Herberger, which implies that it had a greater value than vacant land, and possibly Landvoigt himself organised the construction of a house. The house has also been attributed to the work of local stonemason Carl Nitschke. The property was sold to butcher Henry Collings in 1855.

Finally, in the following year, the property was purchased by Christian Jaensch, and it then remained in his family for over 90 years. Christian Jaensch was a farmer who arrived in Hahndorf in 1839 and was one of the original trustees of the Hahndorf settlement. He constructed his first cottage at 84 Mt Barker Rd in c1839, then moved to (and constructed?) the larger shop-house at 47 Mount Barker Rd in 1856. He also constructed workers' cottages to the rear of the shop. In 1911, the property passed to butcher Wilhelm Jaensch, and in 1945 the property was subdivided by M Jaensch. The Jaensch shop-house has continued to be used as a shop or residence and is currently a souvenir shop with outbuildings.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is one of the earliest German shop-houses to survive in Hahndorf, and is an outstanding representative of mid-19<sup>th</sup>-century German design and construction. The addition of the former workers' cottages make this precinct of outstanding interest to the early development of Hahndorf. The complex makes a significant contribution to the heritage and interpretation of the town of Hahndorf, a town which contains the most significant group of pioneering German development to be found anywhere in Australia. Thus the building is both an outstanding example of its type, and a vital component of Australia's most significant German heritage precinct.

**fr Christoph shop-house****Place no.: 357****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of South Australia's most significant tourist attractions. The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. The western side of the main street was not subdivided until 1849, when the land was purchased by Kanmantoo mine captain Joseph Remfrey who then surveyed it and sold off individual allotments during the next few years. In 1853, the property at 51 Mount Barker Rd was sold to HCFW Habich, who then sold it on to Friedrich Paech in 1858. The property was then purchased by watchmaker and 'storekeeper' August Christoph in 1861. Christoph and his newly-wed wife arrived in South Australia in 1849 and then settled in Hahndorf in about 1854. They lived and worked in the shop-house at no. 51 from 1861. This is one of Hahndorf's most substantial commercial buildings of the mid-19<sup>th</sup>-century and has significant associations with the town's early commercial development and German heritage.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is one of the largest mid-19<sup>th</sup>-century shop-houses to be constructed in Hahndorf and is an outstanding example of a two-storey German shop-house of that period. The loft-shop also makes a significant contribution to the heritage & interpretation of the town of Hahndorf, a town which contains the most significant group of pioneering German development to be found anywhere in Australia. The former Christoph shop-house is both an outstanding example of its construction & type, & a vital component of Australia's most significant German heritage precinct.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The front-facing half-hipped shop with loft residence displays a particularly German design which makes a vital contribution to the German heritage of Hahndorf and South Australia.

**ASSESSMENT OF HERITAGE VALUE****Description**

Large [painted] stone & brick shop-house with loft under half-hipped cgi roof which continues to a raked cgi verandah. Details include timber-framed openings, timber doors, timber-framed casement windows and red-brick chimneys. The barn to rear has half-timbered walls with pug infill, a cgi gable roof and timber-framed openings.

**Statement of Heritage Value**

This is an excellent surviving example of a mid-19<sup>th</sup>-century German shop-house and barn which display early German design characteristics and construction methods, and have significant associations with the early development of Hahndorf.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, having significant associations with the early commercial and residential development of the main street of Hahndorf.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, the barn being an uncommon surviving example of a half-timbered structure with pug infill.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an outstanding example of house-shop & barn construction respectively, and a vital component of Australia's most significant German heritage precinct*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, the house displays typical pioneer German shop-house design, while the barn includes an uncommon surviving example of a half-timbered structure with pug infill.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**HCFW Habich's shop-house & barn****Place no.: 361****ASSESSMENT OF HERITAGE VALUE**

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of South Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. The western side of the main street was not subdivided until 1849, when the land was purchased by Kanmantoo mine captain Joseph Remfrey who then surveyed it and sold off individual allotments during the next few years. On 26 March 1853, Remfrey sold the property at 55 Mt Barker Rd to labourer HCFW Habich. Habich was a miner from the Harz mountain who constructed the current shop-house with barn to rear. The shop-house was used as a pharmacy and residence for many years and remained in the Habich family until 1912. This is one of Hahndorf's most significant mid-19<sup>th</sup>-century commercial buildings and has close associations with the town's early commercial development and German heritage.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The barn is a half-timbered structure with pug infill. The use of German half-timbered construction was relatively common in 19th-century South Australia. However, many of these early German constructions are now gone, and those which survive are now relatively uncommon.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is one of the most significant mid-19<sup>th</sup>-century shop-houses to be constructed in Hahndorf, and is an outstanding example of a two-storey German shop and residence of that period. The barn to the rear of the shop is also an outstanding surviving example of a half-timbered German outbuilding of the pioneer period. The pair of buildings make a significant contribution to the heritage and interpretation of the town of Hahndorf, a town which contains the most significant group of pioneering German development to be found anywhere in Australia. Thus the shop-house & barn complex are both outstanding examples of their construction and type, and a vital component of Australia's most significant German heritage precinct.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The shop-house displays typical pioneer German design, while the barn displays early half-timber construction with pug infill.

**Address** 66-68 Mt Barker Rd, Hahndorf

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Single-storey building constructed of large coursed stone blocks with shaped stone voussoirs over cambered openings and a cgi gable roof, timber-framed multi-paned casement windows and a timber door and pair of windows with fanlights. Parts of the original 1839-40 cottage is included within the earliest section of academy, now kitchen and bathroom at rear of building. The 1871-72 building is a two-storey building constructed of stone with rendered dressings and a cgi gable roof. Features include Italianate detailing, projecting sills, a three-storey tower with blind round and semi-circular-headed windows and red brick dressings. The wall to the front of the Academy is constructed of stone with red-brick dressings.

**Statement of Heritage Value**

This is one of the finest surviving school buildings outside of Adelaide and has significant associations with the development of the town of Hahndorf. For nearly 150 years, the school has been a cultural focal point for the town and it continues to be a key element of one of South Australia's major tourist attractions. The quality of the stone construction combines with the museum and art gallery contents to provide vital interpretative information about the development of Hahndorf and its area.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, this is one of Hahndorf's most culturally-significant buildings and has special associations with the educational and social development of the town.
- (d) *it is an outstanding representative of a particular class of places of cultural significance*, being one of the finest surviving school buildings outside of Adelaide.
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics*, the original school building displaying stonework of exceptional quality, and the later school building displaying a notable design and construction.
- (f) *it has strong cultural or spiritual associations for the community or a group within it*, this museum and art gallery form a significant cultural focus for the town of Hahndorf.

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**Hahndorf Academy & fence****Place no.: 371****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The quantity and range of surviving German heritage contributes to the significance of the town. One of the most significant cultural assets in the town is the large-scale, centrally-located Academy.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. By 1841, there were over 40 huts and houses constructed in the town's original allotments. The allotment on the SE corner of Mt Barker Rd and Balhannah Rd originally contained an 1839-40 cottage (possibly owned by Kuchel or Weger?). In 1857, this property was purchased by Mr Boehm, who used the pioneer cottage as the starting point for his private school. Boehm extended the building in many different stages, adding first an additional room, then a new single-storey stone building to the front, and later still several single and then double-storey sections. Boehm wished to provide an outstanding education in both German and English, and grandly named it the 'Hahndorf Academy'. He employed outstanding teachers and eventually achieved a considerable National reputation. Boehm's Academy proved so successful that a large two-storey building was constructed in 1871. In the same year, the Lutheran school next door was constructed (having previously been located in St Michael's church). In 1872, Boehm was able to extend his own two-storey school further, and add the tower, after receiving a grant from the Government.

In 1878, Boehm sold the building to the Lutheran church for use as a seminary. However, Boehm repurchased the building in 1883, and it then continued as a school until 1916. It has subsequently been used as a hospital and nursing home (1917-37), council offices, betting shop, dentist's surgery, army headquarters, apartments and a recreation centre. During the late 20<sup>th</sup> century, the Academy went through a serious decline and was even threatened with demolition in 1960. In 1966, the old school was purchased by artist Walter Wotze, who oversaw its restoration and converted it to an Art Gallery. During the next few decades, the Academy held many notable exhibitions including significant retrospectives of the work of local artist Hans Heysen. Notable visitors included the Duke of Edinburgh and many important Australian personalities. The building is now used as a combined gallery, museum and shop, and is a focal point of the visitor's cultural experience of Hahndorf. Not only is it a prominent centrally-located building in Hahndorf, but it provides a wealth of interpretative material for those interested in the history and cultural significance of Hahndorf.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is one of the largest and most significant 19<sup>th</sup>-century school buildings outside of Adelaide. Dating from 1857, it was renowned for providing education of the highest quality. The surviving building includes a mid-19<sup>th</sup>-century school building displaying an outstanding quality of stone construction (single-storey section) and a prominent and well-constructed 1871-72 building with small tower. The wall is also an important component of the school precinct.

## Hahndorf Academy & fence

Place no.: 371

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The original school building demonstrates an outstanding quality of stonework, comprising large coursed stone blocks with shaped stone voussoirs over cambered openings. The 1871-72 building is a significant local landmark which displays fine stonework, and an extended design including tower and Italianate rendered detailing around openings. The wall is a fine example of a late 19<sup>th</sup>-century institutional stone wall.

**Criterion (f)** *it has strong cultural or spiritual associations for the community or a group within it.*

This museum and art gallery form a significant cultural focus for the town of Hahndorf. For nearly 150 years, the school has been a cultural focal point for the town and it continues to be a key element of one of South Australia's major tourist attractions. The quality of the stone construction combines with the museum and art gallery contents to provide vital interpretative information about the development of Hahndorf and its area.

**JG Haebich's house, cottages, tank & wheel-circle****Place no.: 378****Address**

75 Mt Barker Rd, Hahndorf

**ASSESSMENT OF HERITAGE VALUE****Description**

Half-timbered **house** with rendered brick infill and a half-hipped cgi roof. Features include timber-framed openings with timber doors and multi-paned casements, and red-brick chimneys. [The raked verandah with iron-lace is a later addition and is not part of the significant fabric]. The **cottage** to rear of house is a stone building with hipped cgi roof, timber-framed openings and red-brick chimney and includes a kitchen and large oven. The extended **loft-house** is to rear of early cottage and includes early interiors with stencils to walls & timber ceilings. The extension (now laundry) includes a bake-oven opening and chimney (oven now gone). There is also a large stone **tank** to the rear of the house, and a brick wheel-circle near the tank.

**Statement of Heritage Value**

This house & earlier cottages have significant associations with the early development of Hahndorf and its distinctive German heritage. The half-timbered house is also an uncommon and outstanding example of a typical German half-timbered residence with half-hipped roof.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, the original c1846 cottage, later stone cottage and later half-timbered house having significant associations with the early development of Hahndorf.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, being an uncommon surviving example of a half-timbered cottage with half-hipped roof.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, the house in particular being an outstanding example of a mid-19<sup>th</sup>-century German pioneer half-timbered house.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, especially the half-timbered construction and half-hipped roof of the house.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**JG Haebich's house, cottages, tank & wheel-circle****Place no.: 378****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. The western side of the main street was not subdivided until 1849, when the land was purchased by Kanmantoo mine captain Joseph Remfrey who then surveyed it and sold off individual allotments during the next few years. In 1850, he sold lot 25 to Johann Georg Haebich, who had arrived in South Australia on the *Patel* in 1846. During the next few years, Haebich constructed a small loft cottage with bakehouse (cottage survives although bakehouse now gone), then a stone cottage, and finally a larger half-timbered house adjacent to the main street. In 1855, he purchased the adjacent allotment from Remfrey, land on which he is reputed to have established the town's first smithy in the late 1840s. In 1880, the current smithy was constructed closer to the Main Rd. The half-timbered house with earlier residential buildings to rear is one of the best pioneering German residences to survive on the main street and has close associations with the town's early residential development and German heritage.

The original Haebich complex included JG Haebich's **first cottages, the half-timbered house, bakehouse (now gone), tank, wheel-circle** (for constructed carriage wheels), smithy/workshop (73 Main Street), blacksmith's shed, cowshed, shed, a tyre-plate & the cottage of JG Haebich's sons 'boys' house' (71 Main Street). See Young 2:308 for a plan of the Haebich complex. The above places in bold are included in this State Heritage recommendation report, the smithy complex has been recommended for the State Heritage Register, and the Haebich 'boys' cottage' has been recommended for the Local Heritage Register.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The use of German half-timbered construction was relatively common in 19<sup>th</sup>-century South Australia. However, many of these early German constructions are now gone, and those which survive are now relatively uncommon. There are also few which survive in such excellent condition, the half-timbering having been carefully restored in the late 20<sup>th</sup> century. This place has exceptional interpretative qualities which are no longer commonly found in Australia.

**JG Haebich's house, cottages, tank & wheel-circle****Place no.: 378**

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is an excellent surviving example of a pioneering German half-timbered building with a half-hipped roof, as well as an earlier cottage and bakehouse. The Haebich house also makes a significant contribution to the heritage and interpretation of the town of Hahndorf, a town which contains the most significant group of pioneering German development to be found anywhere in Australia. Thus the Haebich house is both an outstanding example of its construction and type, and a vital component of Australia's most significant German heritage precinct. The former cottages to the rear of the house also make a significant contribution to the interpretation of the former history of the site, and the typical way of life and property development of the pioneering German settlers.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

Haebich's house is an outstanding surviving example of pioneering German building design and techniques, especially the half-timbered wall construction comprising exposed timber frame with rendered brick, the loft window to the gable end, and the half-hipped roof.

**HISTORY**

In 1860, the half-timbered house had a timber-shingle roof. The cgi roof with raked verandah was added in the late 19<sup>th</sup> century. By 1950, the place had been painted and iron-lace added to the verandah. In the late 20<sup>th</sup> century, the half-timbered walls were restored.

**ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of South Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. One of the earliest buildings in the town was the cottage which was constructed at 84 Main Street by Christian Jaensch. Jaensch was a farmer and butcher who arrived in Hahndorf in 1839 and was one of the original trustees of the Hahndorf settlement. He constructed his first cottage at 84 Mt Barker Rd, then later moved to the larger shop-house at 47 Mount Barker Rd in 1856. In 1868, Christian Jaensch's cottage was transferred to his daughter Hannah Louise Gates. In 1881, the property was transferred to labourer John Wilson, and in 1925, Thomas Shueard purchased the property, subsequently subdividing it to construct the adjacent 1930s shop. Part of the cottage at no. 84 was apparently demolished during this period, but what remains probably includes some of Hahndorf's earliest surviving fabric. The surviving half-timbered building with its distinctive German style and construction makes a substantial contribution to the strong German character and heritage of Hahndorf, as well as to an understanding of the early development of the town.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The use of German half-timbered construction was relatively common in 19<sup>th</sup>-century South Australia. However, many of these early German constructions are now gone, and those which survive are now relatively uncommon.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is a significant surviving example of a pioneering German half-timbered building with a half-hipped roof. The cottage also makes a significant contribution to the heritage and interpretation of the town of Hahndorf, a town which contains the most significant group of pioneering German development to be found anywhere in Australia. Thus the cottage is both an outstanding example of its construction and type, and a vital component of Australia's most significant German heritage precinct.

### ASSESSMENT OF HERITAGE VALUE, cont.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The cottage at 84 Mt Barker Road is a good surviving example of pioneering German building design and techniques, especially the wall construction comprising exposed timber frame with pug infill, and the half-hipped roof.

---

### HISTORY

This cottage has sometimes mistakenly been called the German Arms Hotel. The hotel was established in 1839 at no. 80 Mt Barker Rd (next door to Jaensch's cottage). However, the hotel was burnt down in 1861. A new German Arms Hotel was subsequently built across the road.

**Detmold, fr Wittwer house & barn****Place no.: 385**

---

**Address** 85 Mt Barker Rd, Hahndorf

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Two-storey symmetrical house constructed of coursed stone blocks [painted to front] with projecting stone quoins and a hipped cgi roof. Features include a hipped raked cgi-roofed verandah with timber posts and cast-iron balustrades and brackets, timber-framed openings with timber casements, timber doors and upper-storey windows with fanlights, & red-brick chimneys. The barn is a stone and timber structure with some timber-slab cladding and a cgi gable roof.

**Statement of Heritage Value**

Detmold is Hahndorf's grandest residence and displays high quality design and outstanding construction techniques, as well as having close associations with the early development of Hahndorf and with one of the town's most prominent citizens, miller Wilhelm Wittwer.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, being associated with the early residential development of Hahndorf as well as with the prominent Wittwer family, founders of the town's significant flour mill.
- (d) *it is an outstanding representative of a particular class of places of cultural significance*, being an exceptionally-fine 1860s residence.
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics*, the house displaying an attractive symmetrical design, fine detailing and outstanding stone construction techniques and the barn early timber-slab construction methods.

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**Detmold, fr Wittwer house & barn****Place no.: 385****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of South Australia's most significant tourist attractions. The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. One of Hahndorf's most notable mid-19<sup>th</sup>-century residents was Friedrich Wilhelm Wittwer. As a young boy, Wittwer travelled to SA aboard the Zebra in 1838 with his father Johann Friedrich Wilhelm Wittwer and family. His future wife Louise Paech was also on board with her family. Wittwer sr was allotted land on the main street of Hahndorf in 1839, and had paid it off by 1853. However, he did not settle in the town, but chose to establish himself on River Road, where he constructed a house (now Willow Cottage) and watermill (1842-43, now gone). It was his son Wilhelm who developed and settled on the land within the township. Wittwer jr trained as a miller at his father's watermill, and in 1853, he purchased Nixon's flour mill, the 1842 windmill between Hahndorf and Mt Barker. Wittwer's milling business proved successful, and in 1861, he was able to build a large two-storey residence on his father's land in the Hahndorf township. This house was called Detmold, and was the most substantial residence on the main street. From the year of its construction, the front room of Wittwer's residence was used as the town Institute for many years. Meanwhile, Wittwer was able to further demonstrate his prosperity by constructing a large new flour mill on Hahndorf's main street in 1864. This mill was located opposite Detmold, on a different block of his father's land. When the new mill was completed, he ceased milling at Nixon's windmill and transferred the millstones to his new Hahndorf mill. The new mill proved extremely successful and became one of Hahndorf's most significant businesses, a fact which increases the significance of Wittwer and of his impressive residence. This well-constructed stone house makes a significant contribution to the heritage of Hahndorf and to an understanding of the town's early development.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is a particularly fine 1861 residence with a notable symmetrical front and high quality stonework. As a residence, it also stands out as the grandest and most classical of the mid-19<sup>th</sup>-century houses in Hahndorf.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

Detmold displays an attractive symmetrical design, fine detailing and outstanding stone construction. The barn is an important surviving example of timber-slab construction.

**Wotzke House (Jahn)****Place no.: 387**

---

**Address** 90 Mt Barker Rd, Hahndorf

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Two-level loft-house constructed of [rendered] brick with stone section to south end, and a half-hipped cgi roof with raked verandah on timber posts. Features include timber-framed openings with timber doors and multi-paned casements, and symmetrical red-brick chimneys.

**Statement of Heritage Value**

Wotzke house has significant associations with the early development of Hahndorf and represents an important part of Hahndorf's distinctive German heritage.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, the mid-19<sup>th</sup>-century German house having significant associations with the early development of Hahndorf.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, being an outstanding example of a mid-19<sup>th</sup>-century house with typical half-hipped roof-form.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**Wotzke House (Jahn)****Place no.: 387****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. The land on which Wotzke's house is located was purchased by Heinrich Jahn in 1858, and he constructed the house soon afterwards. The house was subsequently purchased by Fritz Wotzke, and he established a cloth-dyeing business in the back-yard by c1875 (see photo of sign on house, Butler 481). This house makes an important contribution to the distinctive German heritage of Hahndorf.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

Wotzke house is a well-preserved and -constructed example of a mid-19<sup>th</sup>-century German settler's cottage, and the original half-hipped roof with gable windows in particular demonstrate typical German design characteristics of the period.

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Substantial stone loft-house with stone dressings, timber lintels and sills and a half-hipped timber-shingle [cgi covered] roof with raked cgi verandah on timber posts. Features include timber-framed openings with timber doors and multi-paned casements, a central red-brick chimney above an internal cooking hall, and an additional red-brick chimney to south end.

**Statement of Heritage Value**

The former Thiele house is one of the oldest surviving buildings in Hahndorf and is an outstanding representative of pioneer construction techniques, the earliest development period of Hahndorf, and its distinctive German heritage.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, being one of Hahndorf's earliest buildings and having significant associations with the special German character of Hahndorf.
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance*, being an uncommon surviving example of a loft-house with half-hipped roof and an internal cooking hall.
- (d) *it is an outstanding representative of a particular class of places of cultural significance*, being an outstanding example of a mid-19<sup>th</sup>-century German pioneer house with its timber lintels, internal cooking hall, loft windows and half-hipped roof.
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics*, especially the distinctive German design of the house including features such as timber lintels, internal cooking hall, loft windows and half-hipped roof.

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**Office, fr Thiele House****Place no.: 394****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, and the eastern side of the main street as its base. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. Two of the earliest settlers in Hahndorf were Anna Dorothea Schmidt and Johann Friedrich Thiele, who were also the first couple to marry in the village. They were married under a tree whose timber was subsequently used for detailing in the construction of their 1845 stone loft-house. This house is one of the best pioneering German residences to survive on the main street and has close associations with the town's early residential development and German heritage.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

Three uncommon features of this house are the timber lintels, formerly a typical feature of South Australia's primitive buildings but now relatively uncommon, the timber-shingle half-hipped roof, and the internal cooking hall or black kitchen.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is one of the most intact surviving of a mid-1840s residence to survive in the State, and is also an outstanding surviving example of a pioneer German residence including timber-shingle half-hipped roof, timber lintels and central 'cooking hall' chimney.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The stonework and timber detailing on this house, particularly the timber lintels and timber-shingle roof provide significant evidence of South Australia's earliest construction techniques, whilst the distinctive half-hipped roof form, loft windows and use of a central internal cooking hall are significant representatives of traditional German design characteristics.

*Office, fr Thiele House, 2004*

**fr Lubasch barn, Beerenberg farm****Place no.: 404**

---

**Address** lot 29, Mt Barker Rd, Hahndorf

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Two-level barn constructed using half-timbered walls with wattle-and-daub infill and a steeply-pitched cgi (original timber-shingle) gable roof. Features include timber-framed windows, timber doors and internal timber and wattle-and-daub partitions.

**Statement of Heritage Value**

This is one of the earliest surviving farm buildings in the Hahndorf area and has significant associations with the early agricultural and cultural development of the area. It also displays significant early construction techniques (half-timbered walling) and typical pioneer German design characteristics.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, being a significant 1840s barn in the Hahndorf area which has important associations with the early settlement and agricultural development of the area.
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance*, being an uncommon surviving example of a half-timbered barn with wattle-and-daub infill and a steeply-pitched roof.
- (d) *it is an outstanding representative of a particular class of places of cultural significance*, being an exceptional surviving example of an 1840s half-timbered barn.
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics*, displaying early half-timbering and wattle-and-daub construction techniques, and pioneer German design characteristics.

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**fr Lubasch barn, Beerenberg farm****Place no.: 404****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

The town of Hahndorf and its surrounding area have a German heritage of unique quality. The large numbers of German immigrants who settled here from 1839 have left a profound influence on the landscape. Not only is the town of Hahndorf an exceptional exemplar of German culture and construction methods, but there are also several smaller settlements, farm complexes and individual buildings which retain a strong heritage. One of these is the former Lubasch barn at the Beerenberg farm. This is one of the earliest buildings in the Hahndorf area and was constructed by pioneer Gottfried Lubasch in the 1840s. Lubasch made a Special Purchase of the 52-acre section 3812 on 17 June 1844 at a cost of £104. He constructed a large German barn on his land soon afterwards, and this formed the focus of his farm for many decades. The building survives as a significant reminder of the early agricultural practises of the area, as well as the pioneering settlement patterns, strong German heritage, and original construction techniques.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The use of German half-timbered construction was relatively common in 19<sup>th</sup>-century South Australia. However, many of these early German constructions are now gone, and those which survive are now relatively uncommon. This is an uncommon surviving example of half-timbered walling with wattle-and-daub infill, and is also endangered by disuse.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This an outstanding example of an 1840s half-timbered barn and makes a significant contribution to the heritage and interpretative qualities of the Hahndorf environs.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The walls clearly display their construction with the exposed timber frame having deteriorating wattle-and-daub infill. The steeply-pitched roof is an important German design element in this significant representative of an 1840s farm building.

**Mooney barn-house, fr Reimann****Place no.: 407****Address** Schroeder Rd, Hahndorf**ASSESSMENT OF HERITAGE VALUE****Description**

Substantial two-storey barn-house with a half-hipped cgi roof (originally timber-shingle) with skillion extensions to W & E. The building has a complex structure, the original northern section of which is a half-timbered barn-house with red-brick infill and timber detailing. To the south gable end, and to the western and south-eastern lean-tos the walls are constructed of random coursed sandstone. The southern gable end has a pair of windows to upper level and pair of doors to lower. Openings in stone section are topped with cambered red-brick arches. All openings have timber-frames, with original features including timber doors and timber-framed casement windows. Internal features of significance include original floor and ceiling timbers and partitions, and early floor tiles to former verandah. In the SE corner is a red-brick chimney.

**Statement of Heritage Value**

This is South Australia's most significant surviving large-scale German barn-house and has vital associations with the early agricultural and cultural development of the State. It has a unique design incorporating a variety of farming and domestic uses with a residence and displays significant early construction techniques (half-timbered walling) and typical pioneer German design characteristics. It is also a unique and endangered example of its class, and is a significant cultural marker in the Hahndorf environs.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, being the best surviving example of a German barn-house and surviving as a significant reminder of the early agricultural and domestic practises of mid-19th-century German farmers, as well as the strong German heritage and pioneering settlement of the Hahndorf area.
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance*, being a unique example of a large-scale German barn-house which is endangered by disuse.
- (d) *it is an outstanding representative of a particular class of places of cultural significance*, being the best surviving example of a German barn-house.
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics*, particularly the remarkable internal design, the external Germanic appearance (esp. the extended half-hipped roof-line), and the outstanding half-timbered frame.
- (f) *it has strong cultural or spiritual associations for the community or a group within it*, being potent cultural marker in the German farming landscape around Hahndorf.

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

\*This is a rare surviving example of a combined German barn and house which is endangered by disuse and neglect. This place stands out as the most significant German farm building in the entire district, and as such it is strongly recommended that it should be conserved.

**Mooney barn-house, fr Reimann****Place no.: 407****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

The town of Hahndorf and its surrounding area have a German heritage of unique quality. The large numbers of German immigrants who settled here from 1839 have left a profound influence on the landscape. Not only is the town of Hahndorf an exceptional exemplar of German culture and construction methods, but there are also several smaller settlements, farm complexes and individual buildings which retain a strong heritage. The most outstanding individual building in the Hahndorf area is the barn-house on Schroeder Road. This was constructed by Carl Friedrich Edward Reimann soon after he took up the land in 1854. He initially constructed a smaller half-timbered barn-house, but this was soon extended to include a substantial stone section, and to provide for a wide variety of uses under the one roof. As well as the residential quarters (mostly made up of various interconnected rooms), there was a dairy, internal stone kitchen, stables, an implement and buggy shed, a chaff room and a hay loft. There is no known comparable example of a barn-house on this scale anywhere in Australia. Although it has been disused for several decades and is in serious need of attention, this remarkable building retains a high integrity and exceptional interpretative qualities. It also survives as a significant reminder of the early agricultural and domestic practises of mid-19<sup>th</sup>-century German farmers, as well as the strong German heritage and pioneering settlement of the Hahndorf area.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

This is a rare surviving example of a combined German barn and house which is endangered by disuse and neglect. This place stands out as the most significant German farm building in the entire district, and as such it is strongly recommended that it should be conserved.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is the best-known surviving example of a true German barn-house, namely a building which housed humans and farm animals and functions under one roof. The original barn house was the half-timbered section of the house, which was soon extended to include the substantial stone section. The design, construction and layout of the building was complex, and the number of different uses of the various sections was impressive. These features combine to create a unique representative of a single-building farm complex.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The design of this building is outstanding, combining traditional German barn design with residential elements and providing spaces for a variety of functions, with the unifying feature being the half-hipped roof. The construction methods used for the building are also of exceptional significance, especially the sophisticated half-timbered frame of the original section, designed and constructed in a similar way to the best half-timbered barns (see Young et al, pp 191-3 for sketches showing design and construction), and the use of timber-slab cladding.

**Criterion (f)** *it has strong cultural or spiritual associations for the community or a group within it.*

This is a significant local landmark situated on the corner amongst open farmland. The distinctive Germanic form with its sprawling half-hipped roof, and the visual evidence of the buildings farming heritage combine with its location to create an evocative record of the German farming culture which created the Hahndorf landscape of today.

**Mooney barn-house, fr Reimann****Place no.: 407****HISTORY**

This barn was constructed by CFE Reimann in c1854, and remained in his family until it was purchased by the Mooneys in 1895. The building has remained in the Mooney family for over 100 years.

**fr JFW Paech house, cottage & hut****Place no.: 410****Address**

7 Victoria St, Hahndorf

**ASSESSMENT OF HERITAGE VALUE****Description**

Two-level loft-house constructed of [rendered] stone with loft under cgi gable roof with red-brick chimneys. Also attached former cottage to rear constructed of half-timbered frame with pug infill. Details to both house and fr cottage include hipped raked cgi verandah on timber posts, timber-framed openings, timber doors & timber-framed casement windows. The detached hut to rear is constructed of timber-slabs with a stone hearth and flue, and a stone and brick-based rectangular smoking chamber.

**Statement of Heritage Value**

This is a significant early German group in Hahndorf and displays important information about the development of German residences, and the various designs and construction methods which make them so distinctive.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, being a mid-19<sup>th</sup>-century complex which reveals important information about the pioneer German way of life and the development of Hahndorf.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, namely an uncommon slab hut with rare smoke chamber, and uncommon half-timbering with pug infill.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, especially the hut which is a unique and highly significant example of its type.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, especially the timber slab construction of the hut, the design of the smoking chamber, the half-timbering to cottage, and the loft-house design of house.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register. The description of the place should be updated.

**fr JFW Paech house, cottage & hut****Place no.: 410****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, the eastern side of the main street as its base and Victoria Street as its left arm. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. A rare surviving example of one of these crude early huts survives on allotment 11 on Victoria St. One of the original settlers of Hahndorf was Johann Friedrich Wilhelm Paech, who was allotted the land at no. 7 Victoria St in 1839. He initially constructed a timber-slab hut with a stone hearth and flue, and a brick- and stone-based smoking chamber. It is now located to the rear of the house. By the early 1850s, Paech had constructed a more permanent hut. This second residence was a half-timbered cottage with pisé infill, now located adjacent to the rear of the present house. Finally, a more substantial, stone loft-house was constructed adjacent to the street. The way in which the residential complex developed is typical of pioneer German properties. The various buildings reflect significant information about the development of Hahndorf in its first few decades, and contribute to its distinctly German character.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The hut is an uncommon example of a 150-year-old timber-slab hut which includes a rare example of a rectangular gable-roofed attached smoking chamber. The former cottage attached to the rear of the house also displays uncommonly surviving half-timbered construction with pug infill.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

The hut is an outstanding surviving example of an early slab cottage, especially due to its stone fireplace and rare smoking chamber.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The hut is a significant example of early timber slab construction and displays a remarkable design incorporating a stone & brick-based smoking chamber. The cottage adjacent rear of house displays half-timbering with pug infill. The house is a good example of mid-19<sup>th</sup>-century German loft-house design.

**ASSESSMENT OF HERITAGE VALUE****Description**

House with original timber cottage to rear and barn to side. **House** is a typical Australian symmetrical cottage constructed of local stone with red-brick dressings, a hipped cgi roof, hipped concave verandah, red-brick coursing and chimney, and timber-framed openings including doors and double-hung sash windows. Original **cottage** is timber-framed with timber-slab cladding a cgi-clad gable roof, timber-framed openings including timber door and casement windows, and a red-brick chimney with coursing. **Barn** is timber-framed structure with timber-slab cladding, a cgi gable roof and timber-framed openings and doors.

**Statement of Heritage Value**

This is a significant early German group in Hahndorf and displays important information about the development of German farm complexes, demonstrates typical designs and construction methods of early barns & cottages, and shows the way in which German settlers gradually became more Australian.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, being a mid-to-late-19<sup>th</sup>-century complex which reveals important information about the pioneer German way of life and the later development of Hahndorf.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, namely two uncommon surviving slab buildings (barn and original cottage).*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, the barn and cottage both being outstanding surviving examples of their respective types.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, especially the timber slab construction of the cottage & barn.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register. The description of the place should be updated.

**fr Liebelt cottage & barn, & Rothe house****Place no.: 410****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of Australia's most significant tourist attractions. The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, the eastern side of the main street as its base and Victoria Street as its left arm. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. One of the original settlers was Gottfried Liebelt, who was allotted the property on which 9 Victoria St now stands in 1839. He constructed a timber cottage with kitchen, and a timber barn on his property, both of which are good examples of typical early timber-slab construction. Gottfried's wife inherited the property after his early death, and then owned it for several decades. In 1868, it was transferred to Friedrich Schneider, who then sold it to Rothe in 1885. It was probably at this time that the larger stone house was constructed closer to the road and in front of the original cottage. The style of this house is typically Australian, and indicates the way in which the German settlers in the area had become acclimatised to the standard Australian design and use of materials. The way in which this complex developed is typical of pioneer German properties. The timber barn and cottage in particular reveal significant information about the development of Hahndorf in its first few decades and contribute to its distinctly German character.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The cottage and barn are both uncommon surviving examples of 150-year-old timber-slab buildings.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

The cottage and barn are each outstanding examples of their respective types, especially as there are now relatively few surviving timber-slab buildings. They both retain a high integrity, have significant interpretative qualities, and make an important contribution to the heritage of Hahndorf, a town which contains the most significant group of pioneering German development to be found anywhere in Australia. Thus the barn and cottage are both an outstanding example of their construction and types, and a vital component of Australia's most significant German heritage precinct.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The cottage and barn are significant examples of early timber slab construction. The high quality timber detailing to floor and superstructure are illustrated by Young et al (p 106). The plan and frame structure of the cottage is illustrated by Young et al (p 107).

**ASSESSMENT OF HERITAGE VALUE****Description**

Two-level loft-house constructed of coursed stone with loft under cgi gable roof. Details include hipped raked cgi return verandah on timber posts, timber-framed openings, timber doors, timber-framed casement windows, loft window, and red-brick chimneys. The former barn-cottage is constructed with a timber frame to which timber-slabs are attached from the inside, a cgi gable roof, timber-framed openings, timber doors, timber-framed casement windows, and a red-brick chimney. There is also a stone well, and a 19<sup>th</sup>-century timber post-and-rail fence.

**Statement of Heritage Value**

This is a significant early German group in Hahndorf and displays important information about the development of German residences, and the various designs and construction methods which make them so distinctive.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, being a mid-19<sup>th</sup>-century group which reveals important information about the pioneer German way of life and the development of Hahndorf.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, namely an uncommon slab cottage with rare internal fixing method.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, especially the cottage, which is a unique and highly significant example of its type.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, especially the timber slab construction and design of the cottage and the loft-house design of house.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register. The description of the place should be updated.

**fr Hoffmann house, cottage, well & fence****Place no.: 410****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, the eastern side of the main street as its base and Victoria Street as its left arm. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. One of the original settlers was Gottfried Hoffmann, who was allocated the allotment at what is now 15 Victoria St (lot 7) in 1839. Hoffmann constructed a timber-slab cottage and barn on his property. However, in 1853, he followed Kavel to the Barossa, selling his property to cabinet maker Johann Willemer. In May of the same year, the property was sold to Ignatz Deimel, who subsequently rented it to Eleanor Nitschke. It was probably during this period that the stone loft-house to the front of the original cottage was constructed. In 1876, the property was bought by Eleanor Nitschke, who then owned it until it was transferred to Berta Gallasch in 1916. The way in which this property developed is typical of pioneer German farms. Although the barn was demolished in the late C20, the surviving cottage, house, the original well and pump, and the C19 fencing, comprise a group which reveals significant information about the development of Hahndorf in its first few decades, and makes an outstanding contribution to its distinctly German character.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The cottage is an uncommon example of a 150-year-old timber-slab cottage which includes a rare method of fixing the slabs from the inside. The construction of this building has been described and illustrated in Young et al 1979 *Hahndorf*, p 1.95.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

The cottage is an outstanding surviving example of an early slab cottage.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The cottage has a high integrity and displays a significant example of early timber slab construction, especially the internally-fixed slabs. The stone house is a fine representative of mid-19<sup>th</sup>-century German loft-house design and stone construction.

**fr Hoffmann house, cottage, well & fence****Place no.: 410****HISTORY**

This property was owned by Mr Post in the 1980s. At this time, the Hahndorf survey (Young et al) was carried out. There is some confusion in the survey between the significant buildings at no. 15 (Post's farm) and those at no. 9. The 'Post' barn shown on the sketch on p 101 is in fact the barn to left of no. 9.

**fr Schirmer Cottage****Place no.: 414****Address** 19 Victoria St, Hahndorf**ASSESSMENT OF HERITAGE VALUE****Description**

Single-storey half-timbered house constructed using exposed timber-frames with rendered pug infill. The house also has a cgi gable roof with raked verandah, vertical slabs to gable, timber-framed openings with small multi-paned tilting windows, timber doors, timber window-hoods, and red-brick chimneys. There is also a low stone addition with steeply-pitched skillion roof attached to rear.

**Statement of Heritage Value**

This is possibly the oldest house in Hahndorf, has close associations with one of its founding pioneers, and appears to be the most intact surviving example of a half-timbered cottage in the district. Its design is indicative and the quality of its construction is outstanding. It also has profound associations with the distinctive German heritage of Hahndorf and provides exceptional interpretative qualities.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, probably being the earliest surviving cottage in Hahndorf and being closely associated with C Schirmer, one of the original trustees of the town.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, being an rare surviving example of an little-altered and well-maintained half-timbered house cottage.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an outstanding example of a pioneering German cottage.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, demonstrating pioneering German building techniques to an outstanding degree.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, the eastern side of the main street as its base and Victoria Street as its left arm. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. One of Hahndorf's original settlers was Gottlob Schirmer, who was allotted the property on which 19 Victoria St now stands in 1839. He constructed a half-timbered cottage which survives in excellent condition to this day, and is one of the oldest surviving half-timbered buildings in South Australia. Its distinctively early detailing with its tiny windows implies an early date, c1839 or early 40s. This is one of the best-preserved and most representative pioneer cottages in the area. Its distinctively German construction is of special significance to the history of the State because of the way it provides evidence of the German settlement of the Hahndorf area, demonstrates the German way of life and construction methods, and contributes to the strong heritage character of a town which is one of South Australia's most significant tourist attractions.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The use of German half-timbered construction was relatively common in 19<sup>th</sup>-century South Australia. However, many of these early German constructions are now gone, and those which survive are now relatively uncommon.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is one of the oldest surviving half-timbered houses in the State and is an outstanding example of its type. The exposed structure has been carefully restored, and the building is an outstanding representative of German construction methods of the early 1840s. It also makes a significant contribution to the heritage and interpretation of the town of Hahndorf, a town which contains the most significant group of pioneering German development to be found anywhere in Australia. Thus the house is both an outstanding example of its construction and type, and a vital component of Australia's most significant German heritage precinct.

**fr Schirmer Cottage****Place no.: 414**

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

This is one of the best-preserved and most beautifully-constructed half-timbered houses surviving in South Australia. This outstanding c1841 half-timbered house displays typical early German design and construction techniques, particularly the construction of the walls with pug and brick infill to substantial timber frame, and the use of small-paned windows. The house also demonstrates one of the typical building designs of South Australia's earliest settlers.

**HISTORY**

In 1857, the property was transferred to Carl Borchers, the blacksmith whose workshop is adjacent to the Hahndorf Inn.

**Schneemilch house & barn****Place no.: 415****Address** 23 Victoria St, Hahndorf**ASSESSMENT OF HERITAGE VALUE****Description**

**House** constructed of coursed stone with loft under half-hipped cgi roof with gable addition to front and skillion to rear. Details include raked cgi return verandah on timber posts, timber-framed openings, timber doors, timber-framed casement windows, loft window, small half-round headed opening in gable of villa addition and several rendered chimneys. The house displays a typical although now uncommon passage-kitchen layout, and includes a central kitchen flanked by one room to each side and providing access to hay loft and attic above.

The **barn** is constructed with a timber frame with timber-slab [and some corrugated-iron] cladding. Barn has a cgi gable roof with skillion-roofed timber-framed additions, timber-framed openings and timber doors. Internally, the barn displays adzed timbers for loft flooring, partition walls and some posts, rafters which have been tied to the roof-beam (rather than pegged), and some surviving red-gum mortice and tenon-jointed cow bales.

**Statement of Heritage Value**

This is a significant early German barn and house in Hahndorf and displays significant information about the development of German barns and residences. In particular, the barn displays an outstanding level of design and construction.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, being an 1840s house and barn which reveals vital information about the pioneer German way of life and the development of Hahndorf.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, namely an uncommon slab barn with outstanding detailing and interpretative qualities.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, the barn in particular being an outstanding surviving example in terms of its history, associations, construction, integrity, landmark and interpretative qualities.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, especially the outstanding level of timber detailing and German design of the barn.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register. The description of the place should be updated to include the barn.

**Schneemilch house & barn****Place no.: 415****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hahndorf is a town of outstanding significance within the context of the history of South Australia, and indeed the whole of Australia. The town's exceptional and distinctive German heritage demonstrates its profound associations with the first German settlers and their culture and religion. After Klemzig (which retains very little evidence of its German heritage), Hahndorf was the earliest town to be settled by the Germanic migrants. These migrants came from parts of Eastern Germany & Poland and settled in the Hahndorf area from 1839. The buildings they constructed there in the first few decades of settlement generally employed distinctively Germanic construction methods. The best surviving examples of these early German constructions are of special significance to the history of the State, especially because of the way they provide evidence of the German settlement of the Hahndorf area, demonstrate the German way of life and construction methods, and contribute to the strong heritage character of a town which is one of Australia's most significant tourist attractions.

The first subdivision of the town comprised a U-shaped set of allotments with St Michael's Lutheran church at its centre, the eastern side of the main street as its base and Victoria Street as its left arm. Of the 54 original allotments, 52 had already been developed and contained huts or pise dwellings by 1840. The northern arm of this U-shaped subdivision retains many of its original 'Hufendorf' allotments as well some of Hahndorf's earliest buildings. Several of the properties along Victoria were established as pioneering farms, with several of the original cottages and barns still surviving. With the exception of no. 19, the earlier buildings are located behind a more recent house (7, 9 & 15), or the original residence is within a barn (23). The complexes not only demonstrate the early way of life and construction methods of the pioneering German settlers, but they also document the osmosis from transplanted German cultural traditions to a more Australian style. No. 23 is an outstanding example of this.

The oldest building is the large timber barn, which was constructed in 1839 or soon afterwards by Gottfried Wundke. Wundke was one of the original settlers in the town, being allocated lot 5 on 'North Lane' in 1839. He subsequently constructed a barn which initially included residential accommodation, and was where the owner lived until a separate house was constructed. In 1853, the property was sold to Johann Friedrich Schneemilch, and it remains in his family to this day. A carpenter and 'yeoman', it was possibly Schneemilch who constructed the larger stone residence at no. 23. This was a three-roomed house with adjoining cellar and internal cooking hall. A few decades later, a 'villa' wing was added to the eastern end of the house, by which time the facade had also been somewhat altered. This barn and house have significant associations with the earliest period of development in Hahndorf, and display typical construction techniques of the period.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The barn is an uncommon example of a 150-year-old timber-slab barn which retains a high integrity and displays a number of rare surviving examples of specific early construction techniques and design conventions (see criterion (e) below). The house displays a typical although now uncommon passage-kitchen layout, and includes a central kitchen flanked by one room to each side and providing access to hay loft and attic above.

**Schneemilch house & barn****Place no.: 415****ASSESSMENT OF HERITAGE VALUE, *cont.***

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

The barn in particular is an outstanding surviving example of a timber-framed barn with timber-slab cladding. It has a high integrity and also offers outstanding interpretative opportunities, especially in view of its landmark status, it being one of the few examples of a surviving original German barn located alongside the street.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The barn is of particular significance for displaying detailed information about early German construction techniques, design and usage. Significant construction techniques include the timber-frame with timber-slab cladding, adzed timbers for loft flooring, partition walls and some posts, rafter which have been tied to the roof-beam (rather than pegged), and some surviving red-gum mortice and tenon-jointed cow bales.

The layout of the barn provides evidence of its original use as part residence, namely the former loft (with removable floor) where the Schneemilch family lived while constructing their stone house. Not only does the barn display a high level of construction techniques, but it has a high integrity and is an outstanding representative of early timber construction with fine detailing.

The house is one of the earliest Hahndorf buildings to be constructed by a trained stonemason and displays early stone construction techniques and pioneering German house design. The house also displays a typical although now uncommon passage-kitchen layout, and includes a central kitchen flanked by one room to each side and providing access to hay loft and attic above.

## The Cedars – house complex, studio & bushland (Heysen) Place: 426

**Address** P/S 4096 Heysen Rd, nr Hahndorf

### ASSESSMENT OF HERITAGE VALUE

#### Description

**House** is two-storey with [rendered] stone and brick walls, hipped and gabled cgi roof, timber bargeboards to gable, timber-framed openings with timber doors and multi-paned casements and mullion windows, red-brick chimneys, bay windows and glass-infilled porch (stoep). **Hans Heysen's studio** is an 'Arts & Crafts' inspired building constructed of large blocks of coursed Verdun white limestone with stone detailing, fireplace and chimney, bluestone foundations and plinth, and a gable roof clad with tiles imported from France. Features include a large 'picture' window comprising three attached tall frosted (for light-control) lights with multi-paned fanlights, projecting chimney flanked by mullioned windows, timber door and internal partition, and a heavy timber lintel to fireplace inscribed with 'The Cedars'. **Nora's studio** is a stone building with brick dressings, cgi roof, red-brick chimney and timber casement windows. **Former laundry** has timber-framed walls with weatherboard cladding, casement windows and red-brick chimney. **Garage** is red-brick with timber detailing, cgi roof & store-room. **Gardens** include some original gum trees which inspired Heysen's work, pine and cedar trees planted in 1870, and roses and many other plants planted by Sallie Heysen and her family. **Bushland** comprises about 100 acres of indigenous trees and understorey.

#### Statement of Heritage Value

Hans Heysen is one of Australia's greatest artists and the property which he and his family created and lived in for over 50 years is a National Treasure. Now a museum, the house, various outbuildings, studios, gardens and bushland combine to provide insight into the life of a great artist and conservationist

#### Relevant Criteria

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history*, having close associations with the life and work of local great Australian artist Hans Heysen, and with his early efforts towards appreciation of the exceptional culture and environment of Hahndorf & Australia.
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance*, including rare examples of a purpose-built artist's studio associated with one of our greatest artists, and of 100 acres of indigenous bushland in an area which has mostly been cleared for farming.
- (c) *it may yield information that will contribute to an understanding of the State's history, including its natural history*, especially the bushland which provides evidence of indigenous flora in the Hahndorf area and has significant associations with the early conservation work of Hans Heysen.
- (d) *it is an outstanding representative of a particular class of places of cultural significance*, especially the studio and bushland.
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics*, the garden and bushland being of special aesthetic significance because of their intrinsic values as well as their links with a great Australian artist.
- (f) *it has strong cultural or spiritual associations for the community or a group within it*, being closely interrelated with the cultural identity of the Hahndorf area.
- (g) *it has a special association with the life or work of a person or organisation or an event of historical importance*, namely Hans & Nora Heysen.

### RECOMMENDATION

This place is recommended for retention in the State Heritage Register.

## The Cedars – house complex, studio & bushland (Heysen) Place: 426

### ASSESSMENT OF HERITAGE VALUE

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Hans Heysen (1877–1968, Knight Bachelor 1959) is one of Australia's greatest painters. Many commentators consider him to be the first Australian artist to truly capture the unique Australian landscape and lightscape. Unlike Australia's earlier painters, he painted his environment from an Australian perspective without European overtones. He is also well recognised as the most outstanding portrait artist of the gum tree.

Heysen's two main sources of inspiration were the Flinders Ranges and the environs of his own remarkable home near Hahndorf. Heysen arrived in South Australia in 1884 at the age of seven. Although spending his first few decades in the town of Adelaide, he first visited Hahndorf in 1890, where he became fascinated with the cultural heritage and landscape of the town and its environs. After his marriage in 1904, he lived initially with his parents-in-law in Hurtle Square until he established his own home in 1908. At this time, he and Sallie chose to settle in Hahndorf where they lived in a small cottage in Billygoat Lane until 1912, when they purchased 'the Cedars'.

In 1912, the Cedars was a small cottage surrounded by 32 acres of farmland and a number of mature cedar and pine trees as well as numerous fine eucalypts. The house had been constructed Alfred Wheelwright in 1870, and it was he who planted the pine and cedar around the house. Heysen made extensive additions to the house to accommodate his growing family (eventually 8 children), but his most significant new building on the property was the free-standing stone studio set up on the hill above the house. This building was completed in March 1913 and proved productive place to work.

Other significant buildings at the Cedars included the stone outbuilding which was later used by Nora Heysen as her own studio. Nora (1911-2004) was a significant artist in her own right, numbering among her achievements being the first female winner of the Archibald prize and first female War Artist in Australia. Adjacent to Nora's studio is the timber-framed and weatherboard-clad former laundry and outbuilding, and at the other end of the drive is a brick coach house and tack room. The gardens at the Cedars are also of special significance. These were created by the family around the many significant trees (especially pines, cedars & eucalypts) already existing at the property. Sallie Heysen was renowned for her rose garden. But the most significant features at the Cedars are the numerous eucalypts which Heysen so loved to paint. The preservation of these ancient Australian trees was so important to Heysen that he would often pay for them to be saved. In 1938 he added a further 97 acres of bushland to his property in order to preserve it from desecration. This forest is a significant area of indigenous bushland which has close ties with the work and art of Hans Heysen and with the heritage significance of the Cedars. The whole complex is now a Heysen museum, and as such makes a profound contribution to an understanding of two significant Australian artists, and of the time when the gracious family home was host of some of the 20<sup>th</sup>-century's most prominent personalities (Nellie Melba, Anna Pavlova, Lionel Lindsay, etc).

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The bushland at the Cedars is an uncommon surviving example of a large unsubdivided expanse of indigenous bushland in the Hahndorf area, and as such offers significant interpretative qualities. The studio is also a unique building which offers a rare glimpse at a purpose-built studio-space constructed for a prolific and successful artist. The museum at the Cedars also offers a rare opportunity to experience the life and work of someone who made a difference.

## The Cedars – house complex, studio & bushland (Heysen) Place: 426

---

### ASSESSMENT OF HERITAGE VALUE, cont.

**Criterion (c)** *it may yield information that will contribute to an understanding of the State's history, including its natural history.*

Hans Heysen was not only one of Australia's greatest artists, but he is now recognised as one of Australia's first conservationists. His art worshipped nature, and through that Art as well as more practically, he proved an effective advocate for the Hahndorf environment. Because of his love for the ancient gum trees of the Adelaide Hills, he deplored deforestation and would often battle with local councils or pay landowners to save the life of an endangered tree. He and Douglas Mawson were two of the founding members on the 1913 South Australian Forest League. His major financial commitment to the environment was his purchase of 100 acres of bushland in 1938. His own property was already 36 acres, but he purchased the two additional adjacent properties in order to preserve their forests from being cleared or farmed. His entire property was then 132 acres, and the bushland has been preserved to this day, thanks to the work of the owners (a Trust comprising four descendents of Heysen), the estate manager, and the volunteer group Trees Please! Inc. This natural bushland is of outstanding significance to the district and indeed the State, as a relatively untouched example of original bushland in a part of the Adelaide Hills which has generally been intensively farmed. The bushland as well as the significant trees and garden elements around the house are also of special significance because of their close association with the artistic vision and work of one of Australia's greatest artists.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

The studio and bushland are both outstanding examples of their type, while the house complex itself has a unique place in the cultural history of Australia, and as such, forms part of a truly outstanding interpretative site (museum).

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The preserved indigenous bushland at the Cedars is an area of exceptional aesthetic quality, as are the gardens around the house of the Cedars. This environment forms a suitable backdrop for the home of one of Australia's greatest artists.

**Criterion (f)** *it has strong cultural or spiritual associations for the community or a group within it.*

In *Heysen's Early Hahndorf*, Colin Thiele comments that:

The purchase of the Cedars was the beginning of one of Australia's most remarkable stories of family life and art, a long association between an artist and his material and spiritual home that lasted for 55 years. Now Hans Heysen could claim that he really belonged to Hahndorf (Thiele 1976, p34)

One of the remarkable things about the Hahndorf/Heysen relationship is that it is so deeply intertwined. Heysen's work has immortalised the natural landscape around Hahndorf as well as the unique Germanic heritage of the town, while the Hahndorf environs have in turn had a profound influence on Heysen and his work, and have proved a constant inspiration. Thus each owes a huge debt to the other, and it is fitting that the Cedars is currently preserved as a museum and offers the many visitors to Hahndorf such a valuable glimpse into one of South Australia's most significant cultural monuments.

---

**The Cedars – house complex, studio & bushland (Heysen)      Place: 426**

---

**ASSESSMENT OF HERITAGE VALUE, cont.**

**Criterion (g)** *it has a special association with the life or work of a person or organisation or an event of historical importance.*

The Cedars most significant associations are with Hans Heysen, an artist whose work and significance has already been outlined in the above discussion. In her formative years, it was also the home and place of work of Nora Heysen, renowned prize-winning artist of the 20<sup>th</sup> century.

**Silvicultural Reserves (1898-1903)****Place no.: 537**

---

**Address** Old Coach Rd, Kuitpo Forest
 

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Plantation comprising several stands of trees dating from 1899–1905 with species including of *pinus radiata*, *eucalyptus sideroxylon*, *pinus canariensis*, *pinus pinaster* and various Eucalypts.

**Statement of Heritage Value**

This is one of South Australia's most significant experimental silvicultural plantations which includes the oldest *pinus radiata* in the State, and provides information about early scientific research in forestry.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, namely the State's earliest experiments in Forestry.*
- (c) *it may yield information that will contribute to an understanding of the State's history, including its natural history, providing information about the establishment and early development of forestry in South Australia.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an outstanding silvicultural reserve.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

---

**ASSESSMENT OF HERITAGE VALUE**

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Kuitpo is one of the most significant man-made forests in the State. It was amongst the earliest to be established with a view to creating a forestry industry. In the late 19<sup>th</sup> century, the Conservator of Forests, JE Brown oversaw the first trial plantations at Kuitpo. Ironbarks were planted at Knott Hill in 1899, and in the following year, South Australia's first *pinus radiata* were planted adjacent to Kuitpo Headquarters. In 1903, the stand of *pinus canariensis* was planted near the *radiata*. The mixed eucalyptus plantation was the second in the Adelaide Hills, and the stands of *eucalyptus sideroxylon*, *pinus canariensis* and *pinus pinaster* are among the oldest silvicultural plantations in the Adelaide Hills. The earliest of these trial plantations are now over 100 years old and make a significant contribution to an understanding of the development of forestry in this State. Their experimental beginnings have matured to provide a record of the history of the Woods & Forests Department.

**Criterion (c)** *it may yield information that will contribute to an understanding of the State's history, including its natural history.*

These silvicultural reserves have significant associations with the birth and development of forestry in South Australia, and yield scientific information regarding successful timber production.

## Silvicultural Reserves (1898-1903)

Place no.: 537

### ASSESSMENT OF HERITAGE VALUE, cont

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This significant early forest is very well-maintained, and its high integrity combine with its early establishment to make it an outstanding silvicultural reserve in the State. Of particular significance is the plantation of *pinus radiata*, the oldest in the State.

**Auchendarroch****Place no.: 840**

---

**Address** 17 Adelaide Rd, Mount Barker

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Substantial 30-roomed stone mansion with rendered dressings, Italiannate detailing and a hipped slate roof. Features include tower with arched openings, return verandahs with brackets, and timber-framed openings with doors and double-hung sash windows. Surviving internal decoration includes original William Morris 'spring thicket' wallpaper, several original tiled fireplaces with oak surrounds, a giant panelled door, and a grand timber staircase.

**Statement of Heritage Value**

Auchendarroch is an outstanding landmark, both historically and in relation to Gawler Street. As one of the town's oldest and as the most substantial of the town's hotels, it is also significant for its associations with pioneer MacFarlane, the Barr-Smith family, and with the development of hospital facilities in the town and its contribution to the war effort. The building has a commanding presence over and vital associations with the history and development of Gawler Street and the State.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, namely the early establishment of hotels along significant trade routes, the early development of Mount Barker, the achievements of Robert Barr Smith, and the reuse of obsolete grand dwellings during the 20<sup>th</sup> century and beyond.*
- (c) *it may yield information that will contribute to an understanding of the State's history, including its natural history, the garden including an outstanding specimen of golden oak.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an outstanding example of a Victorian mansion with significant internal features.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, as a fine example of a Victorian former hotel and mansion with outstanding internal decoration.*
- (g) *it has a special association with the life or work of a person or organisation or an event of historical importance, namely Robert Barr Smith.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

## Auchendarroch

Place no.: 840

---

### ASSESSMENT OF HERITAGE VALUE

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

Auchendarroch is Mount Barker's grandest mansion and has significant associations with the development of the town. It was constructed in 1860 and 1878. One of the most significant early pioneers of Mount Barker was Lachlan MacFarlane, who purchased section 4476 from John Finniss in 1842. In 1860, MacFarlane borrowed £1,000 from Archibald Walker with which he established the Oakfield Hotel at the top of Gawler Street. This hotel occupied a prominent location on the main street through Mount Barker, and used to serve the mail coaches on their way to the main Murray crossing at Wellington.

The hotel was sold to Robert Barr Smith in 1878, who proceeded to make substantial alterations to create a grand summer residence which he named 'Auchendarroch' (Gaelic for Oakfield). The grand house became the home of many original Morris & Co. fabrics and wallpapers and was a notable showpiece around the turn of the century. At this time, the Barr Smith's were one of the State's most significant families, and many notable people would have visited them at their mansion. The house survives as a reminder of the lifestyles of Adelaide's elite in the 19<sup>th</sup> century.

In 1922, Auchendarroch was sold to the Methodist Church and used as a convalescent home. It became a branch of North Adelaide's Soldiers' Memorial Hospital in 1935, and was also used during WWII for convalescence. In the late 20<sup>th</sup> century, the estate was bought by Bob Wallis, owner of Wallis Theatres. The former hotel and house has now become a convention centre and entertainment complex.

**Criterion (c)** *it may yield information that will contribute to an understanding of the State's history, including its natural history.*

Robert Barr Smith was a keen amateur botanist, and one of the features of his garden is a rare golden oak, believed to be biggest specimen in Australia.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This an outstanding example of a grand residence, particularly because of its associations with the interior furnishings of Morris & Co. and its former position as the acme of Victorian style.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The original Oakfield hotel was a fine two-storey building of eight main rooms and Classical detailing which dominated Gawler Street and was a notable landmark on the main road through Mount Barker. When the Barr Smiths converted it to their summer residence in 1878, they employed architect John Grainger (father of Percy Grainger). The resulting building was a fine 30-roomed Victorian mansion and was particularly noted for its fine interior features and Morris & Co. furnishings. The former mansion has recently been carefully restored and retains many of its original features. Surviving internal decoration includes original William Morris 'spring thicket' wallpaper, several original tiled fireplaces with oak surrounds, a giant panelled door, and a grand staircase.

**Auchendarroch****Place no.: 840**

**Criterion (g)** *it has a special association with the life or work of a person or organisation or an event of historical importance.*

The current Victorian mansion was created by Robert & Joanna Barr Smith, significant Victorian personalities and benefactors. Robert Barr Smith arrived in South Australia 1856, an experienced businessman who worked as a commission and supply merchant to 'the colonies'. He married Joanna Lang Elder in the year of his arrival, and then established a home & business in Adelaide. In 1878, they purchased the Oakfield hotel in Mount Barker, subsequently transforming it into their grand summer home Auchendarroch. Robert served on the Council of the University of Adelaide for 19 years and made substantial monetary gifts to the Anglican church, University of Adelaide, Mount Kosciusko Observatory, etc. He is especially commemorated by the Barr Smith library of the University of Adelaide, Australia's most extensive University library.

**HISTORY**

In 1922, Auchendarroch was sold to the Methodist Church and used as a convalescent home. It became a branch of North Adelaide's Soldiers' Memorial Hospital in 1935, and was also used during WWII for convalescence. Since 1976, it has been in private ownership, and the house is currently undergoing extensive renovations while the surrounding property is being redeveloped to create a cinema complex and entertainment centre.

---

**Address** 14 Cameron St, Mount Barker

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Three-storey mill building with loft, constructed of local stone with stone dressings and a steeply-pitched [cgi-covered] timber-shingle gable roof. Openings are topped by flat arches using shaped stone blocks (voussoirs) with central keystones. Other features include timber-framed openings, multi-paned timber casements, timber doors, & timber weatherboards to gables. Internal fittings include original timber floors on substantial timber beams and columns, ladder stairs between floors and early fans and chute.

**Statement of Heritage Value**

This is the oldest steam powered flour mill in the State and has vital associations with the early establishment of flour milling in Australia, an industry which combined with grain production and alongside wool and copper, formed the backbone of the South Australian economy for over 60 years. The building demonstrates early construction techniques and mill design, and the grain-store is a rare and outstanding example of an early pre-fabricated iron building.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, being South Australia's earliest surviving steam mill, and representing significant aspects of the early agricultural industry in South Australia.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being the oldest surviving steam mill in the State and an outstanding surviving example of an early 1840s flour mill.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, namely the early design and construction of one of the State's first flour mills.*
- (g) *it has a special association with the life or work of a person or organisation or an event of historical importance, namely significant miller John Dunn.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**former Dunn Mill****Place no.: 880****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

For the first 70 years, South Australia's three major export products were copper, wool and grain. The grain industry was the first to make a significant impact on the landscape of Australia, with tracts of land being cleared for planting, and a number of associated farm buildings being scattered through the landscape. The Adelaide Hills attracted most of the first early agricultural farmers, and it was there that the State's first mill was constructed in 1841. In the following year, Nixon erected a windmill near Mount Barker. Then in 1844, John Dunn constructed the district's first substantial steam mill on Cameron Street in Mount Barker. Being one of the young colony's first mills, Dunn's mill processed grain from all over South Australia. The mill proved extremely successful, largely due to the previous experience of John Dunn.

Dunn arrived in South Australia in 1840, already an experienced miller able to establish and manage mills for himself and the South Australian Company. Those who purchased the first Special Survey (Finniss, Dutton and the MacFarlanes) realised that a successful flour mill would greatly enhance the prosperity of their new town of Mount Barker, so they presented Dunn with one and half acres of town land in 1844. Within the same year, Dunn had constructed and commenced production in a substantial stone mill on Cameron Street in Mount Barker. Dunn resided in a timber hut until his own stone cottage was constructed in 1848. Both the mill and stone cottage are currently included in the State Heritage Register. Dunn put his Mount Barker land to good use. He established several workers' cottages and alms houses (including 'Salem Cottages' on Druids Avenue); and Gawler Street's first general store (now 'Home'). He purchased several sections of land between the mill and Littlehampton on which he established 'Dunn's Run' and his 1864 mansion 'the Laurels'. Meanwhile Dunn was becoming an increasingly successful and influential man. In 1859, he constructed the significant flour mill at Bridgewater. His company John Dunn & Co, of which his sons William and John were partners along with William Hill & George Shorney, soon became the largest milling company in the colony. They purchased mills throughout the colony including at Nairne, Port Adelaide, Port Pirie, Port Augusta, Wilmington, Quorn & Port Broughton. The flourishing of Dunn's enterprise sprang from the seed sown in Hay Valley and then Mount Barker, and his Cameron Street mill now survives as a significant reminder of the earliest period of agricultural development in the State.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is the oldest surviving flour mill in the State and is an outstanding representative of an early Australian mill building. The mill has a relatively high integrity, and as such offers significant interpretative qualities as well as its outstanding historical significance

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

This is a well constructed early building which demonstrates the typical design characteristics of South Australia's first steam flour mills. The stonework and existing timber detailing to exterior and interior all demonstrate its outstanding level of significance in the context of the early agricultural and industrial development.

**former Dunn Mill****Place no.: 880**

**Criterion (g)** *it has a special association with the life or work of a person or organisation or an event of historical importance.*

John Dunn (1802-1894) was the most influential figure in Mount Barker for over 50 years. He also made a significant impact on the development of South Australia (especially the agricultural and industrial development) during the mid to late 19<sup>th</sup> century. In Mount Barker, he founded the town's first flour mill in 1844. This is now especially significant as it is the oldest surviving steam mill in the State. His contribution to the development of flour milling in the State has already been discussed under criterion (a) above.

John Dunn himself also served in the House of Assembly from 1857-1868, and on the Legislative Council from 1869-1877. Dunn also helped to establish several of Mount Barker's churches by donating money to buy land and for endowments. In the early days church services were held in his mill, it being one of the town's most solid and spacious buildings. His most generous bequest was to the Wesleyans of Mount Barker, for whom he spent over £4,000 for a new church in 1884. This building is now known as the Dunn Memorial Church in his honour.

**ASSESSMENT OF HERITAGE VALUE****Description**

Loft-house with cellar constructed of stone with a hipped [cgi-covered] timber-shingle roof. Features include timber-framed openings with timber doors, shutters and timber-framed windows including dormer, later hipped verandah with timber detailing, substantial stone chimney and tall red-brick chimney. Significant internal features include timber fireplace surrounds and mantelpieces, timber columns with arches, timber floors & slate floor to cellar.

**Statement of Heritage Value**

This is an outstanding example of an 1840s cottage in Mount Barker which is made particularly significant by its close associations with John Dunn and his significant steam mill. The building also displays rare and uncommon detailing, including the internal timber columns and arches, and the original timber-shingle roof.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, having profound associations with the oldest steam mill in the State and with the early operations of John Dunn.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, displaying a rare example of internal columns and arches, and an uncommon surviving example of a timber-shingle ceiling.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an excellent surviving example of an 1840s cottage made even more significant by its associations with one of South Australia's most significant early industrial complexes.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, displaying significant early design elements and construction techniques.*
- (g) *it has a special association with the life or work of a person or organisation or an event of historical importance, namely John Dunn.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

## Mill Cottage

Place no.: 882

*Mill Cottage, 2004*

*Mill Cottage, 2004*

**Gray's Inn, hotel + former shop, residence & barn****Place no.: 957****Address** 59-63 Gawler St, Mount Barker**ASSESSMENT OF HERITAGE VALUE****Description**

Two-storey stone hotel with rendered dressings and a hipped cgi roof. Barn is coursed local stone with red-brick dressings. Additional late-19<sup>th</sup>-century buildings which are now part of complex include former general store and former residence. Features include timber detailing including posts and bargeboards, 1880s cast-iron detailing to hotel balcony, finely-detailed red-brick chimneys, balcony and verandah to no.63; timber frames to openings, timber-framed windows (mostly double hung sashes) and timber doors; & parapet, verandah and shop-front to former general store.

**Statement of Heritage Value**

This is an outstanding c1855 hotel group which displays a high level of integrity & continuity. The hotel and barn in particular demonstrate excellent 1850s stone and brick construction methods, as well as 1880s balcony detailing.

**Relevant Criteria**

- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an outstanding example of an 1855 hotel building and barn including fine late-19<sup>th</sup>-century additions.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, especially the design of the hotel and barn, the stonework and balcony detailing to hotel, and the stone and brickwork to barn.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

NOTE: This place may be suitable for removal from the Register after a thematic survey of hotels has been completed, at which time it can be compared with other examples of stone hotel buildings of the 1850s & 80s. It is certainly one of the best examples in the district, but may be of less significance in the context of the State, due to the relatively high number of fine late-19<sup>th</sup>-century hotel buildings which still exist in South Australia.

**Gray's Inn, hotel + former shop, residence & barn****Place no.: 957****ASSESSMENT OF HERITAGE VALUE**

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This hotel complex retains an outstanding integrity, and the former hotel and barn in particular are significant examples of late-19<sup>th</sup>-century hotel construction with a consistent design and use of materials.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

Gray's Inn hotel displays a high level of 1850s stone construction and 1880s detailing including verandah/balcony with fine cast-iron lacework. The barn displays an outstanding quality of construction, including coursed local stonework and fine early brickwork with flat arches over openings (reminiscent of brick detailing to 10 Gawler Street).

**HISTORY**

Mount Barker is one of South Australia's most significant towns, and Gray's Hotel is one of its most prominent buildings. Gray's Inn was constructed by Benjamin Gray (brewer, builder and surveyor of Blakiston) between 1854-55. It was first licensed in 1855 by Cornelius Richard. John Rundle then held the license from 1859-75, and purchased the building in 1873. The building has had many different licensees (see Hoad), and has been extended and added to at various times, including the construction of the current balcony with its cast-iron lace in the 1880s. The Johnston's owned the property for several decades from 1951. The house and general store which are now part of the hotel complex have a separate early history. Built in c1880, the building appears to have originally been a symmetrical u-shaped 'villa' which mirrored the form of the 1875 police station opposite. The RHS (61) of the building was then provided with a timber-framed parapet and became a general store by 1883. During the late 20<sup>th</sup> century, the central section which joined the residence to the shop was removed when a drive-through bottle-shop was created. The buildings are now all part of the Gray's Inn complex.

---

**ASSESSMENT OF HERITAGE VALUE****Description**

Single-storey building constructed of fine early brickwork with brick detailing, original roof form and cgi roof. Features include raked verandah with timber posts [excluding late cast-iron brackets], distinctive chimneys with tall chimney flues, plinth and rendered gable-ends, mid-19<sup>th</sup>-century lean-to extension to rear, timber-frames to openings, timber multi-paned double-hung sash windows, timber door and timber fanlight.

**Statement of Heritage Value**

This is an outstanding example of an early brick Georgian house which has significant associations with the early development of Mount Barker, and demonstrates an outstanding level of early brick craftsmanship and design.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, having significant associations with the early development of one of South Australia's most significant towns, and demonstrating the early history of small-scale residential development in mid-19<sup>th</sup>-century South Australia.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, namely an 1850s brick cottage.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, particularly the outstanding quality of its brickwork.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**former tinsmith's residence****Place no.: 964****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

The former tinsmith's residence was constructed in about 1857 and provides early evidence of high-quality brick construction in the significant early town of Mount Barker. Although most of Mount Barker early buildings were constructed of local stone, locally-made bricks were also a significant early building material (mostly for dressings), and this house is a prime example of their use for wall construction. It demonstrates the early history of small-scale residential development in mid-19<sup>th</sup>-century South Australia

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

The former tinsmith's residence retains high integrity and is an outstanding representative of a mid-19<sup>th</sup>-century brick cottage.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

Harrowfields is constructed of flush-jointed Flemish-bond brickwork with purpose-made voussoirs (alternating long-short pattern) around the semi-circular arch above the front door fanlight. It displays early residential design and brick construction of an outstanding level.

**HISTORY**

This building was constructed in c1856 for tinsmiths William Fuller and Haken Linde. Fuller purchased the entire property in 1857, then sold it in 1867 to Anna Wallace. Various other people have owned or leased the property, including Alick Harrowfield. Harrowfield was a shearer who lived in the house between 1950 and 1975. During and since that time, the house has sometimes been referred to as Harrowfield or Harrowfields. It has recently been used by Nitschke's real estate, and is currently for lease.

**ASSESSMENT OF HERITAGE VALUE****Description**

Two-storey stone bank building with curved corner and art deco design. Features include masonry walls and detailing including projecting stone plinth, classical parapet and cornice, pilaster and coffer detailing to windows, and original roof windows and doors, and surviving remnants of original extension (especially two-storey section). [There is a late-20<sup>th</sup>-century single-storey addition to SW.]

**Statement of Heritage Value**

This bank is an excellent example of a 1930s bank building and displays an outstanding design and quality of detailing for the period.

**Relevant Criteria**

- (d)** *it is an outstanding representative of a particular class of places of cultural significance, namely an art deco bank building.*
- (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, being an outstanding example of institutional art deco design and mid-20<sup>th</sup>-century construction.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

---

**ASSESSMENT OF HERITAGE VALUE**

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This c1939 bank building is an outstanding example of the period with an excellent external integrity and outstanding institutional art deco design.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The c1939 bank displays an outstanding level of mid-20<sup>th</sup>-century construction and is a distinguished representative of institutional art deco design in South Australia. Typical art deco stylistic features include the rounded corner and curved detailing. These modern features are counter-balanced by the heavier Classical design features, the latter denoting a solid and dependable side to the stylish building. The whole design is both successful and descriptive for a 1930s bank building in a successful country town, and the integrity of that design contributes to the bank's outstanding interpretative qualities.

**BankSA****Place no.: 966****HISTORY**

The property on which the bank now stands was purchased by the Savings Bank of South Australia in June 1939. The original building included an extension comprising a two-storey and single-storey section, as well as a boundary wall. The single-storey section and wall were removed or remodelled in the late 20<sup>th</sup> century extension. Most of the original two-storeyed extension was retained. The Bank then sold the property to private owners in 1990, but continue as lessees, using the property for banking purposes.

**Police station, stables & cells****Place no.: 977****Address** 60-64 Gawler St, Mount Barker**ASSESSMENT OF HERITAGE VALUE****Description**

Stone police station with two sets of cells behind, and two-storey stable-block. All buildings are constructed of local stone with red-brick chimneys, rendered dressings to station, cgi roofs, and original timber frames to openings, timber doors and windows. The station also has classical detailing including rendered dressings to windows (with projecting keystones) and corners, paired eaves brackets, plinth, and projecting string course, and a concave cgi verandah with timber posts.

**Statement of Heritage Value**

This significant complex is the oldest surviving police complex in the State and also contains the oldest intact stone building in Mount Barker (stables of 1848), as well as some mid-19<sup>th</sup>-century walls of the earlier station, and the fine station building (front 1875, some earlier fabric incorporated to rear). The complex has vital associations with the early development of Mount Barker and of law & order in the State. The buildings are also excellent examples of their periods and type.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, being the State's oldest surviving police station complex, and have significant associations with the early development of Mount Barker.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, the stables being a rare surviving example of colonial police stables.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being one of the State's most significant police complexes.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, especially the design and construction of the station and stables.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

former police cells, 2002

Rear of police station &amp; cells, 2002

Rear of police cells, 2002

**Police station, stables & cells****Place no.: 977****ASSESSMENT OF HERITAGE VALUE****Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

The first stone building to be constructed on Gawler Street was the police station of 1840. This building, which apparently faced towards McLaren Street, was then extended in 1852. There were also stone stables constructed to the rear in 1848. The earliest located photograph of the police station shows only a corner of a stone building behind the post office. When the new station building was constructed in 1875, some of this earlier stone building was retained as the south-eastern corner of the new building (see photographs below). The two pairs of cells would also have been constructed in 1875. The station was again extended in 1917. In c1950s, a new station building was constructed next door. The stables are now used as outbuildings, and the original police station as CID offices. The surviving buildings are now the oldest police complex in South Australia, and are also excellent representatives of the early establishment and development of policing in South Australia.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

The surviving 1848 stables are a rare and endangered example of early police stables in South Australia.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

This is an outstanding surviving police complex, both in terms of its historical significance and its high integrity. The group is the State's oldest surviving police complex and as such is an unique representative of its type and period. It also displays much of original design and construction, and as such, is a significant representative of its type.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The complex's interpretative qualities are enhanced by its high integrity. The police stables of 1848 demonstrate the earliest period of design and construction in the State, and display typical stone construction techniques of the period. The station building of 1875 (including earlier stone section) displays the 1870s design of police buildings, as well as construction methods of the period. The cells display a standard design for the late-19<sup>th</sup>-century, yet have additional significance because of their close associations with the stables and station at Mount Barker.

**former Undertakers Shop****Place no.: 979****Address** 66-68 Gawler St, Mount Barker**ASSESSMENT OF HERITAGE VALUE****Description**

Two-storey corner shop building with [painted] masonry construction and a hipped cgi roof, and single-storey & two-storey residences to rear. Features include timber-framed openings with cambered heads, multi-paned timber shop windows, timber doors with semi-circular fanlights to chamfered corner, double-hung sash windows & a red-brick chimney. A rare internal feature is the radial timber joists to upper floor.

**Statement of Heritage Value**

This is an outstanding early shop in Mount Barker, in terms of its complex construction (internal radial joists to upper floor), its integrity and its historical associations. As a fine two-storey corner building, it also makes a significant contribution to the Main Street of one of South Australia's most significant early towns.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, being a landmark early commercial building in one of South Australia's most significant towns.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, being an outstanding example of a two-storey 1850s corner shop.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, particularly the design and construction of the internal floor.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

*former Undertakers Shop, 2002*

**former Undertakers Shop****Place no.: 979****ASSESSMENT OF HERITAGE VALUE**

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

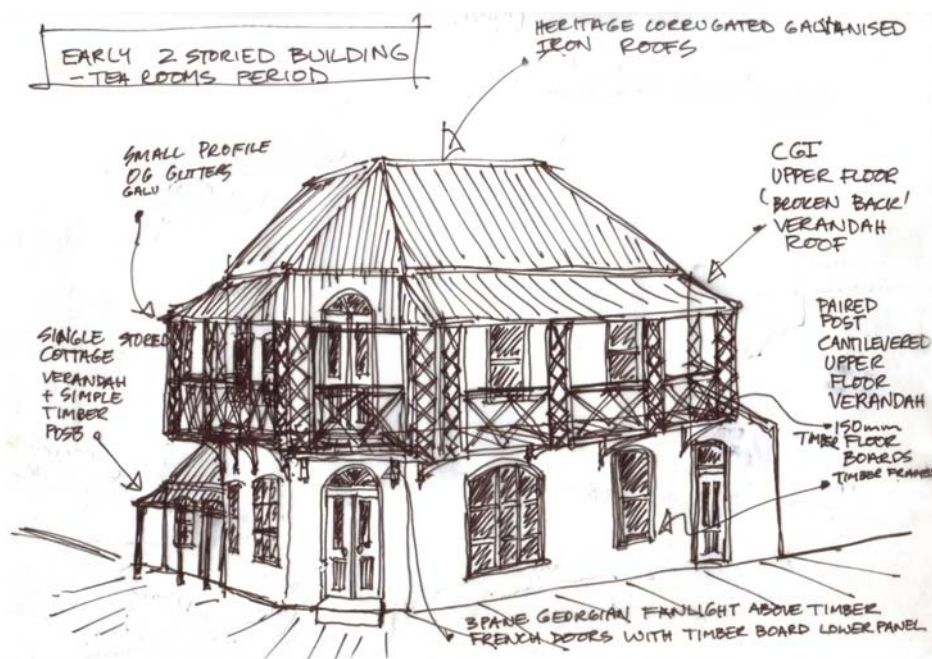

This building was constructed by Dr G Bollen (of Hawthorn Farm). Bollen arrived in Mount Barker in 1855, and when he constructed the two-storey shop at the corner of McLaren & Gawler Street, it was known as Bollen's Folly as there was originally no staircase constructed between the floors (an external stair was added later). By the mid 1860s, a splendid cantilevered balcony was constructed, possibly by the building's first tenant, a local undertaker and carpenter. The building has since been used for a variety of commercial uses, including as tea-rooms in the mid 20<sup>th</sup> century. The building survives as a significant historical landmark in Mount Barker, and provides interpretative information about the construction methods and design of large South Australian shop in the 1850s.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

The former undertakers shop has high integrity and is therefore an outstanding representative of its period of original construction. The surviving building is an outstanding example of a two-storey 1850s shop building in the context of Mount Barker and the State.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The former undertakers shop demonstrates an excellent two-storey corner shop design with chamfered corner and large windows. The building also has an outstanding construction, demonstrated by the stonework (currently painted), the large shop windows with cambered arches, original timber detailing to doors and windows, and the complex internal construction including radial joists to the upper floor. During the 1860s, the building had a particularly striking and individual appearance with its cantilevered balcony (see sketch below), and although it has lost that balcony, the shop form and construction retains a relatively high integrity.

Sketch of 'Bollen's folly' as it would have appeared in the late 19<sup>th</sup> century. (Claire Booth)

**RSL Hall, former Crown Hotel & wall****Place no.: 1025****Address** 23 Hutchinson St, Mount Barker**ASSESSMENT OF HERITAGE VALUE****Description**

Two-storey building with a simple symmetrical design constructed of coursed local stone [part painted] with [painted] dressings and a hipped cgi roof. Features include red-brick chimneys, timber frames to openings, timber double-hung sash windows, metal window hood to N side, and timber doors; also low stone wall alongside footpath.

**Statement of Heritage Value**

This is the second-oldest surviving hotel in Mount Barker, and is the best preserved and least altered of the town's early hotels, as such it makes a vital contribution to an understanding of the architectural and commercial development of Mount Barker. The qualities which make it stand out in Mount Barker, also apply in the context of the State, especially the level to which the little-altered former hotel represents 1840s hotel construction and development.

**Relevant Criteria**

- (a) *it demonstrates important aspects of the evolution or pattern of the State's history, being one of the least-altered and most representative 1840s hotel in the State, and providing authentic representation of early hotel development in South Australia.*
- (b) *it has rare, uncommon or endangered qualities that are of cultural significance, being an uncommon surviving example of an intact 1840s hotel building.*
- (d) *it is an outstanding representative of a particular class of places of cultural significance, namely a Colonial hotel building.*
- (e) *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics, especially its little-altered external form and construction.*

**RECOMMENDATION**

This place is recommended for retention in the State Heritage Register.

**ASSESSMENT OF HERITAGE VALUE**

**Criterion (a)** *it demonstrates important aspects of the evolution or pattern of the State's history.*

The former Crown Hotel was constructed in 1847, only 11 years after the proclamation of the Colony of South Australia and seven years after the establishment of one of the Colony's most significant towns, Mount Barker. The first hotel to be licensed in Mount Barker was the Gloag Inn on Cameron Street (opposite the mill). John Gloag, the founder of that first hotel, then constructed a larger stone hotel building on Hutchinson Street in 1847. This was called the Crown Hotel, and was first licensed under that name in 1849, when Gloag officially transferred the license from his original Gloag Inn. Gloag remained as licensee of the Crown until 1854. The Gloag Inn was eventually demolished, at which time the Crown became the second-oldest hotel in the town (the oldest being the Mount Barker Hotel of 1846). The Crown only remained licensed until 1865. Not only used as a hotel, it also was the venue for the town's earliest council meetings, for large-scale court cases, for meetings of various Lodges, and as a school by Victor

Dumas. In 1872, the former hotel was purchased by Dr Octavius Weld, who used it as a surgery and residence. In 1946, the property was transferred to the RSL. This early hotel building had only a relatively-short period as a hotel, and because it has not been altered and extended during prosperous periods, it retains a high integrity. Of most note is its original square classical form which has not been hidden by later additions. In contrast, Mount Barker's earliest surviving hotel, the Hotel Barker, has been extensively remodelled and added to so that its original early date is no longer clearly apparent. The same can be said of most 1840s hotels in the State, and it is for this reason that the former Crown Hotel is of such significance. The surviving building is a true representative of an 1840s hotel building, and is a rarely surviving intact example of its period. Thus it has outstanding interpretative qualities and reveals authentic information about the construction and appearance of Colonial hotel buildings.

**Criterion (b)** *it has rare, uncommon or endangered qualities that are of cultural significance.*

Because the former Crown Hotel retains its original form and has been so little altered since it was first constructed in 1847, it is now an uncommon surviving intact example of a Colonial hotel building.

**Criterion (d)** *it is an outstanding representative of a particular class of places of cultural significance.*

Because it has been so little altered, the former Crown Hotel is a true representative of an 1840s hotel building, and is a rarely surviving intact example of its period. It has outstanding interpretative qualities and reveals authentic information about the construction and appearance of Colonial hotel buildings. The original stone wall adds to the interpretative qualities of the hotel.

**Criterion (e)** *it demonstrates a high degree of creative, aesthetic or technical accomplishment or is an outstanding representative of particular construction techniques or design characteristics.*

The former Crown Hotel is notable for its high integrity and the fact that it retains its original 1840s form (external design). The authentic qualities of the building demonstrate Colonial hotel design and construction to an extent that is rarely found in South Australia, given that most of our surviving early hotels have been much altered and added to during their 150 years of development. The major feature of the building is its simple and elegant square symmetrical design with flat-arch-topped openings, squat double-hung sash windows and central entry.
